MICHAEL ORWIN'S ZX81 CASSETTES

THE BEST SOFTWARE (BY VARIOUS AUTHORS) AT LOW PRICES

QUOTES

"Michael Orwin's £5 Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."

From the ZX Software review in
Your Computer, May '82 issue.

"I had your Invaders/React cassette . . . I was delighted with this first cassette."

P. Rubython, London NW10

"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."

E.H., London SW4

". . . I previously bought your Cassette One and consider it to be good value for money!"

Richard Ross-Langley
Managing Director
Mine of Information Ltd.

CASSETTE 1
(eleven 1k programs)

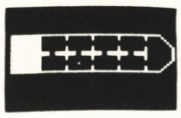
machine code:
React, Invaders, Phantom aliens, Maze of death, Planet lander, Bouncing letters, Bug splat.
Basic:
I Ching, Mastermind, Robots, Basic Hangman. PLUS Large screen versions of Invaders and Maze of Death, Ready for when you get 16k.
Cassette One costs £3.80

CASSETTE 2
Ten games in Basic for 16k ZX81

Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.
Cassette Two costs £5.

CASSETTE 3
8 programs for 16k ZX81

STARSHIP TROJAN

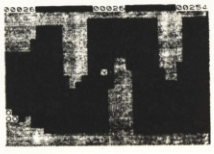


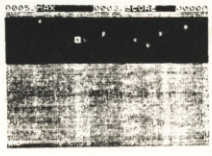
Repair your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.

STARTREK This version of the well known space adventure game features variable Klingon mobillity, and graphic photon torpedo tracking.
PRINCESS OF KRAAL An adventure game.
BATTLE Strategy game for 1 to 4 players.
KALABRIASZ World's silliest card game, full of pointless complicated rules.
CUBE Rubik Cube simulator, with lots of functions including 'Backstep'.
SECRET MESSAGES This message coding program is very txlp qexi jf.
MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.
Cassette 3 costs £5.

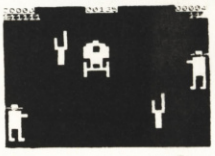
CASSETTE 4 **8 games for 16k ZX81**

ZX-SCRAMBLE (machine code) with 3 stages.
Bomb and shoot your way through the fortified caves.

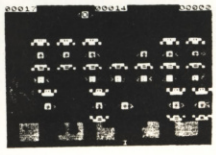


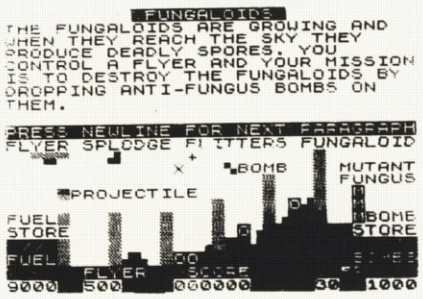


GUNFIGHT
(machine code)



INVADERS
(machine code)





GALAXY INVADERS (machine code)
Fleets of swooping and diving alien craft to fight off.

SNAKEBITE (machine code)
Eat the snake before it eats you. Variable speed. (very fast at top speed).

LIFE (machine code)
A ZX81 version of the well known game.

3D TIC-TAC-TOE (Basic)
Played on a 4 × 4 × 4 board, this is a game for the brain. it is very hard to beat the computer at it.

7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman). Cassette 4 costs £5.

Recorded on quality cassettes, sent by first class post, from:
Michael Orwin, 26 Brownlow Rd., Willesden, London NW10 9QL (mail order only please)

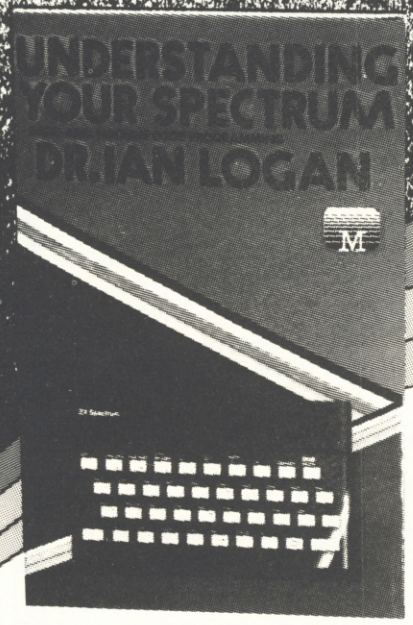
ANNOUNCING The BEST Books For Your SPECTRUM



Dr. Ian Logan is the acknowledged leading authority on Sinclair computers. In this book, he gives a complete overview of the way the Spectrum operates, both for BASIC and machine language programming. A special section on the ROM operating system will give you insight into this computer as well as provide you with information on how to use many of the routines present in the ROM. This book is a must if you are serious about programming the Spectrum . Only £7.95.

Over the Spectrum is the book where your dreams really do come true! With the full listing of over 30 programs for your Spectrum, this book will show you how to use the computer's complete facilities. Exciting games such as *Meteor Storm*, *Eliminator* and *Spectrum Invaders*, together with utilities, educational programs, programming tips and hints, make this the definitive book for every Spectrum user. Only £6.95.

This title speaks for itself, it's everything you need to understand about *Spectrum Machine Language* when you're just starting off. A must for all new Spectrum owners. Only £6.95.

After leading the way in Sinclair ZX81 software, we've produced the highest quality, most exciting Spectrum software available. From the three excellent books depicted above to fast-action games on cassette, we're providing the best choice in Sinclair Spectrum software today.

Whether it's for your new Spectrum or ZX81 Melbourne House has books and programs perfectly suited to your needs.

Send for your Spectrum or ZX81 catalogue today.

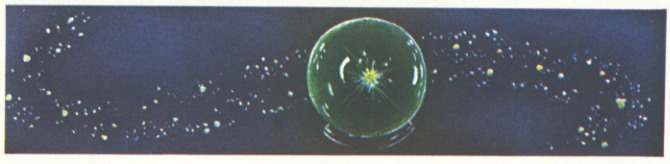
MELBOURNE HOUSE PUBLISHERS

Spectrum excuses run out

SINCLAIR RESEARCH announced the Spectrum in a blaze of publicity in April. At the time the company was stating that the machine was ready to be despatched and that production was ready to meet the expected demand.

The confidence of the company was matched by the enthusiasm with which people placed their orders. Since then, nothing seems to have gone right and the disillusion of customers throughout the

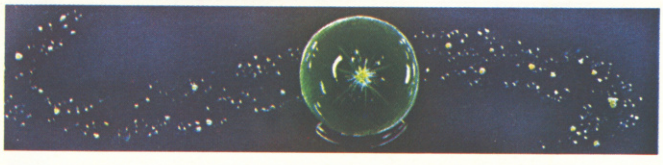


country has grown. *Sinclair User* has been flooded with telephone calls and letters from people expressing their dissatisfaction with the way they have been treated.

The level of the anger has filtered through to Sinclear Research and Clive Sinclair considered the situation to be so bad that he wrote to the magazine explaining the problems. It is printed in *Spectrum User*. A voucher for £10 and a promise that the backlog should be cleared by the end of September is being offered to customers, some of whom have been waiting for three months.

The most unfortunate feature is that it could easily have been avoided. Sinclair Research makes great play of the fact that it can work to strict deadlines, It is an ability of which to be proud — if it can be achieved. There is no reputation to be gained from making claims which cannot be justified.

The company can advance any number of excuses but the fact remains that it has not been



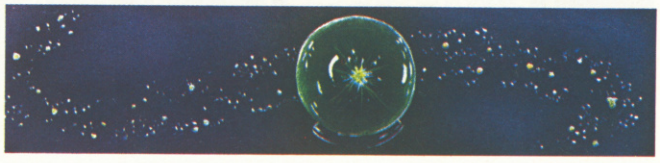
able to substantiate the claims it made at the time of the launch. Problems in gearing-up to full production, obscure faults discovered after production began, and unexpected demand are all acceptable in companies new to the market but Sinclair Research has had the experience of two previous machines, yet still seems unable to profit from experience.

The only excuse for not making sure that the Spectrum was ready to go ahead as soon as it was announced, with a suitable stock to ensure that unexpected demand could be met, was that it had to rush to market a machine to beat the opposition. That does not apply in this case.

It would have made no difference to the competitive position of Sinclair if the machine had not been announced until September. It would, however, have made a great difference to its position with its customers.

It has been said that Sinclair Research is a company with a technology bias. That is used as an excuse for its poor customer relations. That is a reasonable comment for a company which is doing research work for other companies. It is not acceptable for one wishing to deal so closely with the public.

It is also inconsistent. Clive Sinclair is scarcely an innocent where employing the media to publicise his successes is concerned. The shortcomings



appear once the machine has been developed and the market has been created.

None of that should detract from the achievements of the company. In a very short time it has developed a dominant position in the home computer market. Such success, however, brings its own pressures. Others see the profits which can be made and in a short time methods which worked less than a year ago are no longer sufficient to ensure that the leading position is maintained.

Clive Sinclair is worried, and probably rightly so, about the threat from the Japanese. It has not appeared yet. The only competition has been from other British companies, which seem to suffer from the same delivery problems as Sinclair Research. It will not last for ever. The best way to meet the threat is to have the proper product at the proper place at the proper time and the ability to meet the demand satisfactorily.

Sinclair scores on the product side. Once it can organise its production effectively it should have no difficulty in justifying the image it has built for itself.

Major Savings on software for business

Prices of Hilderbay range are cut by 10pc

OUR OFFER to club members this month has a strong bias towards people who prefer to use their Sinclair machines for serious applications.

The major part of the offer, which as usual is exclusive to members of the Sinclair User Club, is a 10 percent reduction in the price of the products of Hilderbay. The company range includes a tested tape recorder and a loading aid, as well as a large range of business software.

The price reductions, listed below, are a major saving and will go a long way to off-setting the cost of membership.

All the prices quoted include VAT and postage and packing except for the tape recorder, for which an extra £2 is charged.

As seen in the listing, some of the software is also available for the Spectrum.

The rest of this month's Star Offer is made up by the Micro Gen chess program for the Spectrum, known as Master Chess. Again this is being offered at a discount to members of 10 percent. That reduces the normal price of £9.90 to £8.90 for club members. As usual, to permit new members to take advantage of these offers you can include an order with your application form.

STAR BARGAIN

Members can take advantage of the discounts until the end of October.

	Usual Price	Club Price
Tape Recorder	**£22**	**£19.80**
Hilderbay loading aid	**£5.95**	**£5.35**
Software for the ZX-81:

Telephone service answers problems

A NEW service is available for members of our popular Sinclair User Club.

A telephone problem-answering service is now available, exclusive to members. The number has been announced on the cassette sent to members midway through August.

Members will be able to telephone the number with any problems they may have in using the Sinclair machines. We started the service because we thought it important that members should have somewhere they could obtain expert advice immediately.

The August cassette was the first to be sent

continued from page 7

since we began the Sinclair User Club. They were produced for both the ZX-81 and the Spectrum.

They contain the first in a series of articles on how to use machine code in programming. The introductory article, written for people who already know how to program in Basic, compares commands in Basic to those in machine code.

The cassettes also contain a special bomber game, with versions for both the ZX-81 and the Spectrum.

Cassettes have been sent to all people who joined the Sinclair User Club by the second week in August. Those who joined after that date will receive their first cassette at the beginning of October.

As well as the second article in the machine code programming series it is intended to have a problem page service, with matters which are of special concern to members, more games for the ZX-81 and Spectrum, and news about the activities of club members.

The cassette and the telephone problem-line are just two of the advantages to be gained from joining the Sinclair User Club. It is also possible to obtain discounts on a number of popular items which are available to enhance their Sinclair machines.

Each month we arrange a special Star Offer which is usually available until the end of the month. We are also considering offering longer-term discounts on a variety of items in the growing market for hardware add-ons and software.

A year's subscription costs £12 and that can easily be recouped by taking advantage of the special discounts which we negotiate for our members.

To take advantage of all these benefits, complete the application form today, making sure that you indicate which machine you own so that we can send you the correct cassette.

Britain

Aylesbury ZX Computer Club: Ken Knight, 22 Mount Street Aylesbury (5181 or 630867). Meetings: first Wednesday and third Thursday of the month.

Doncaster and District Micro Club: John Woods, 60 Dundas Road, Wheatley, Doncaster DN2 4DR; (0302) 29357.

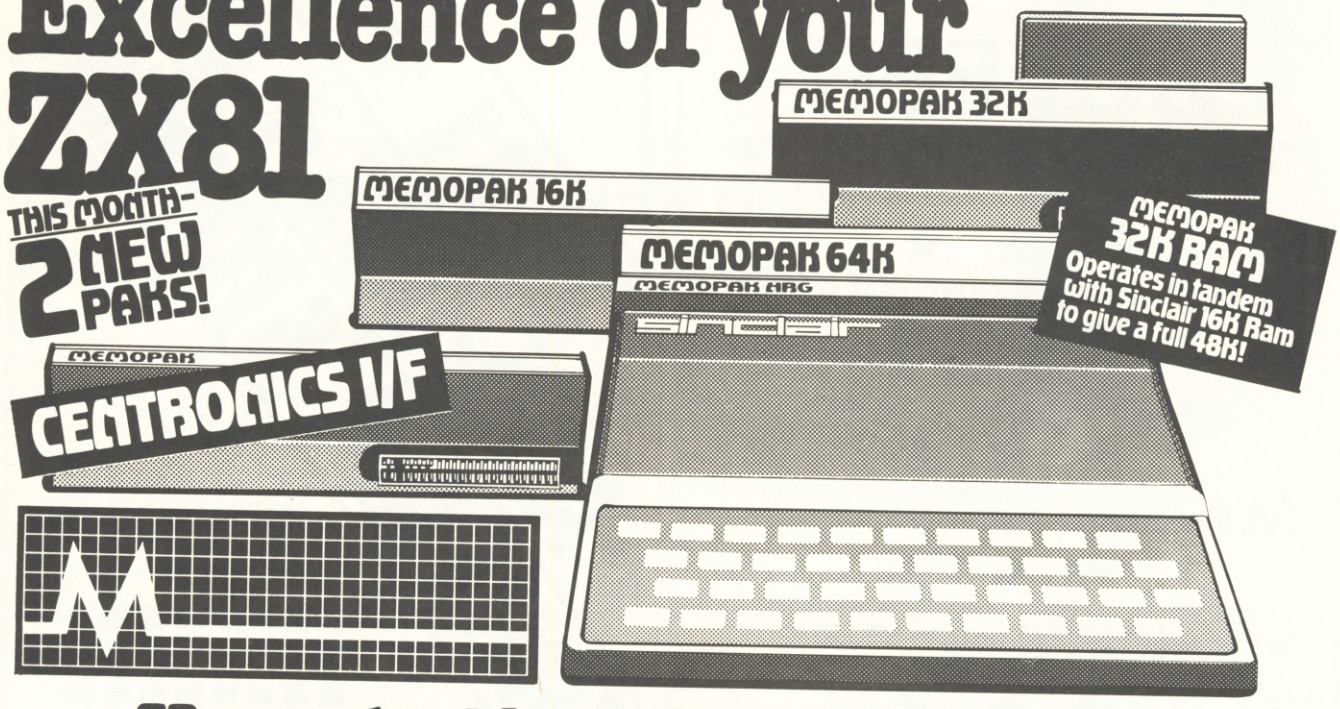
MEMOTECH Explores the Excellence of your ZX81

THIS MONTH— 2 NEW PAKS!



Memotech's Memopak Range

All five of the currently available Memopaks are housed in elegant black anodised aluminium cases, and are styled to fit wobble-free onto the back of the ZX81, allowing more add-ons (from Memotech or Sinclair) to be connected.

£68.70 plus VAT

MEMOPAK 64K MEMORY EXTENSION

The 64K Memopak extends the memory of the ZX81 by 56K, and with the ZX81 gives 64K, which is neither switched nor paged and is directly addressable. The unit is user transparent and accepts commands such as 10 DIM A(9000).

Breakdown of memory areas...0-8K-Sinclair ROM. 8-16K-This area can be used to hold machine code for communication between programmes or peripherals. 16-64K-A straight 48K for normal Basic use.

32K £43.43 / 16K £26.00 plus VAT

MEMOPAK 32K and 16K MEMORY EXTENSIONS

These two packs extend and complete the Memotech RAM range (for the time being!) A notable feature of the 32K pack is that it will run in tandem with the Sinclair 16K memory extension to give 48K RAM total.

£52.00 plus VAT

MEMOPAK HIGH RES GRAPHICS PACK

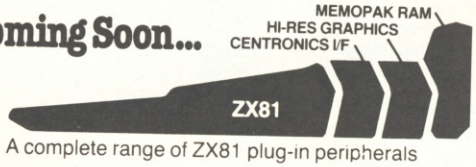
HRG Main Features — • Fully programmable Hi-Res (192 × 248 pixels) • Video page is both memory and bit mapped and can be located anywhere in RAM. • Number of Video pages is limited only by RAM size (each takes about 6.5K RAM) • Instant inverse video on/off gives flashing characters • Video pages can be superimposed • Video page access is similar to Basic plot/unplot commands • Contains 2K EPROM monitor with full range of graphics subroutines controlled by machine code or USR function

£34.70 plus VAT

MEMOPAK CENTRONICS TYPE PARALLEL PRINTER INTERFACE

Main Features — • Interfaces ZX81 and parallel printers of the Centronics type • Enables use of a range of dot matrix and daisy wheel printers with ZX81 • Compatible with ZX81 Basic, prints from LLIST, LPRINT and COPY • Contains firmware to convert ZX81 characters to ASCII code • Gives lower-case characters from ZX81 inverse character set

Coming Soon...



A complete range of ZX81 plug-in peripherals

Digitising Tablet **RS232 Interface**

Spectrum designers use Forth in new home micro

ANOTHER cheap micro has been produced for the home market. The Jupiter Ace is the first computer to be designed by Richard Altwasser and Steven Vickers since they finished design work on the Spectrum.

The new machine, which will be sold by mail order for £89.95, uses the language Forth instead of the more usual Basic used on other microcomputers. Forth was chosen because of its "combination of speed, versatility and ease of programming".

The computer looks rather like a cross between a ZX-80 and a Spectrum. It has a full-size moving-key keyboard, although one thing it does not have is the one-key entry system for which the Sinclair machines have become famous.

As with the Sinclair machines, the Ace can be used with a domestic television set and uses an ordinary cassette recorder for back-up memory. The basic unit has only 3K RAM.

The screen is memory-mapped with a 24 × 32 character flicker-free display and user-definable high-resolution graphics. The cassette interface performs at 1,500 baud and has a Verify command.

It also has a programmable sound generator. "We hope it will be louder than that of the Spectrum," said Vickers.

The Ace will be manufactured by TW Electronics. It has an expansion socket at the rear which the designers hope to use for peripherals, RAM expansion and a colour board. The machine was due for unveiling at the Personal Computer World Show in September.

Colour Genie launch

THE COLOUR Genie is another computer to be unveiled at the Personal Computer World Show. The machine has been produced by Lowe Electronics of Matlock, Derbyshire, and will cost £199.

The new computer will have 16K Basic ROM and 16K of user RAM. The typewriter-style keyboard is similar to previous Genies.

The machine can use up to 16 colours on the screen with a resolution of 160 × 96 for graphics characters. There are 128 programmable graphics characters and 64 present characters.

There will be a range of optional accessories, including a printer interface cable, printer, two joysticks, a position-detecting light pen and a cassette recorder. A full range of software is due to be launched after the launch of the machine.

Lowe now has eight Genie models in its range of computers, including the new Genie III Business System which was also due to appear ot the PCW Show.

£100 is offered to beat ZX-81

A SOFTWARE company is confident that it has produced one of the most difficult games for the ZX-81 that it is offering a prize of £100 to anyone who can beat the computer.

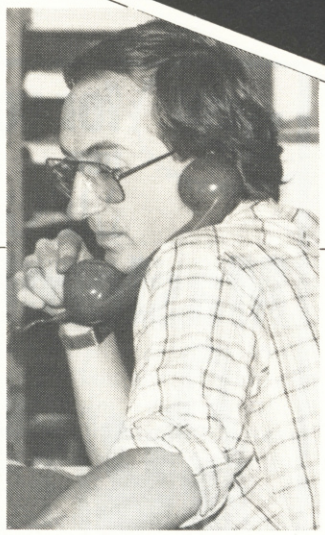
The game, **Awari,** is produced by Understanding of London. It is in three levels of difficulty — rabbit, beast and monster. The prize is being offered to the first person to send a solution to beat the computer at the monster level playing both first and second.

A deadline in early January has been set because of fears that it may not be possible. If no-one has provided a solution by then, the prize will go to the person nearest to winning.

Staff at Understanding have managed to win only playing first at the monster level and the person who wrote the program has not passed the beast.

Awari was developed as a teaching aid and was adapted for micros when home computing began to take off. It is based on a West African game involving distributing beans between seven cups.

Entry forms are available when buying the cassette.



Nigel Boyle

Prices are set to tumble

PRICES of ZX-81 software and hardware are on the way down. Software cassettes for games and business applications which formerly had cost £6 of £7 may now be cheaper by up to £1 or £2.

Quicksilva is one of the companies to have started the move. Its software cassettes **Scramble** and **Asteroids** are down from £5.50 to £4.95.

Hardware is also becoming cheaper and not only because of the drop in market demand. The Quicksilva high-resolution graphics board is down from £85 to £60. Quicksilva says that the drop in price is to keep the ZX-81 hardware moving.

Data-Assette has reduced the price of its data retrieval system, the ZX-99, to £49.95. The reason, said the sales manager Nigel Boyle, was "because Sinclair brought down prices to around £10 cheaper than the ZX-99".

Boyle sees no difficulty in continuing to sell ZX-81 add-ons.

"The ZX-99 makes the computer more advanced. Even if the machine is black and white it gives it data retrieval."

NEW **for your Spectrum**

from **MIKRO-GEN** the leaders in ZX games

Masterchess

the program for the *real* player!

The makers of the original ZX Chess have now produced the most adventurous and enjoyable chess program you can buy for your Spectrum

Ten levels of play + graphic display of board + can change sides or level in midgame + set board to any position + scrolling history of moves + copy display & history to printer at any time + can save game at any point + displays your moves and the computer's + PLUS tournament-style Chess Clock on reverse!

EASILY ONE OF THE MOST POWERFUL CHESS PROGRAMS AVAILABLE
Supplied on cassette, with library case

ONLY £9.95

Other great ZX games and add-ons from Mikro-Gen:

Space Invaders
the best you can get, with ever-increasing rate of play

Breakout
with seven bat angles to make it really difficult

Bomber
positively addictive

Scramble
the fastest arcade-type game available

Sorcerer's Castle
takes you into a world of magical adventure

Above games all supplied on cassette, with library case:

£3.95 each

A/D Converter Board
Lets you connect analogue joysticks to the ZX81 digital inputs. Suitable for many other applications, easy to connect – and it improves RAM pack stability!
ONLY £18.50

Joysticks
Connect via our A/D Board – makes your ZX81 a true programmable games machine
ONLY £9.50 EACH

Disassembler/Monitor
An absolute must when learning machine code – lets you enter and run your own code
ONLY £3.95

Write for full details of the Mikro-Gen range of programs and add-ons, available from local stockists or direct from the manufacturers (please make cheques/PO's payable to Mikro-Gen and add 40p post & packing)

ZX Spectrum

20 Programs £6.95

The ZX Spectrum has brought advanced computing power into your home, The Cambridge Colour Collection, a book of 20 programs, is all you need to make it come alive.

No experience required. Simply enter the programs from the book or load them from tape (£2.95 extra) and run.

Amazing effects. All programs are fully animated using hi-res graphics, colour and sound wherever possible.

Entirely original. None of these programs has ever been published before.

Proven Quality. The author already has 30,000 satisfied purchasers of his book of ZX81 programs.

Hours of entertainment

- **Lunar Landing.** Control the angle of descent and jet thrust to steer the lunar module to a safe landing on the moon's surface.
- **Maze.** Find your way out from the centre of a random maze.
- **Android Nim.** Play the Spectrum at the ancient game of Nim using creatures from outer-space.
- **Biorhythms.** Plot the cycles of your Emotional, Intellectual and Physical activity. Some would say this is not a game at all.

Improve your mind

- **Morse.** A complete morse-code training kit. This program will take a complete beginner to R.A.E. proficiency.
- **Maths.** Adjustable to various levels, this program is an invaluable aid to anyone trying to improve their arithmetic.

Run your life more efficiently

- **Home Accounts.** Keeping track of your finances with this easy-to-use program will enable you to see at a glance where the money goes and plan your spending more effectively.
- **Telephone Address Pad.** Instant access to many pages of information.
- **Calendar.** Displays a 3 month calendar past or future, ideal for planning or tracing past events.

Doubt over accuracy test

IN HIS letter in the August issue, M P Campbell refers to the consecutive application of sin, cos, tan, arctan, arccos, and arcsin — to get back to the original value — as a check for the accuracy of a calculator in handling trigonometric functions.

That artificial test is not a good one as it can give poor results with calculators which are satisfactory for handling complex trigonometric functions in real problems. Campbell quotes a half percent error on Casio calculators and 33 percent error on Sinclair calculators. Using a starting value of pi/4 (45 deg.) my 100-step programmable Novus calculator does not even complete the sequence as an intermediate result is outside the permitted range of the argument for the next function.

When that test is applied to the ZX-81 your correspondent states: "You will be amazed and aghast alternately at the results".

You may be amazed, because the ZX-81 has a much better calculating ability than most desk calculators, but you should not be aghast unless you overlook the argument and result ranges for which the functions are valid.

For example, sin pi/4, sin 3pi/4 and sin 9pi/4 all give the value 0.70710678 (SQR 2)/2) but arcsin 0.70710678 gives pi/4 (0.78539816) because the result of arcsin must be one value and is therefore limited to the range -pi/2 to pi/2.

If the sin cos sequence is started with 3pi/4, it will finish with pi/4.

C. Cuthbert,
Penwortham,
Preston, Lancs.

Rooting for family trees

I SHOULD be grateful if you would let me know if there is any software suitable for recording family trees designed for ZX-81 plus 16K RAM. I may be wrong but I think there may be more to such a program than a simple recorded list.

L Gross,
London, N12.

●*We have not seen any programs for family trees but perhaps readers might be able to help.*

Program points cleared

I READ your magazine with interest and always try the programs in it. Only about four out of every five work; for instance, Tim Crossley's program for **Snap** contained several errors. First, I believe line 110 should read: 110 IF INT(C/2) = C/2 THEN LET B = 18

Also if Bar is printed after the word cherry, you get a new word — BARRRY. Inserting the line:
120 PRINT AT .0.Ø,B;A$;
" " (3 spaces)
instead of line 120 deals with the problem.

One of the problems for any magazine is the general printing of the programs. I know that the quality of some printers is not 100 percent but I am sure bad lines could be printed again, in clear letters. Take for instance Tim Crossley's program again; I could not tell what line 110 read — the first + , if it is a plus, which I believe is " = ", is very confusing.

Alex Clark,
Lichfield, Staffs.

Black Jack error code

IN PUBLISHING my letter regarding **Black Jack** in the June issue, an error crept into lines 20 and 50. They should read:
LET CA = INT (RND * 13) + 2

Ted Maynell,
Penrith, Cumbria.

Adding 16K can be easy

I HAVE read that if a program has been SAVED by a computer with only 1K RAM and subsequently a 16K RAM has been added the 1K program could not be re-loaded without removing the memory expansion.

I have found, on my ZX-81 at least, that is not true. You simply load the program, run it once, 'break' it and run it again. It should work perfectly.

I have bought every issue of your magazine and I think it is great.

Andrew Smith,
(aged 12),
Harlow, Essex.

Plea for notes on listing

I LIKE your magazine very much; I find it very helpful. There is still a great deal which I find very baffling but that is probably my fault. I have tried some of your programs but the clarity is not very good.

In a program there must be notes on what the lines do, so if there are variables which can be changed to alter speed and numbers, I can do so. It helps if I could be told whether to make them smaller or larger; I find that an easier way of learning programing than wading through handbooks and their useless examples.

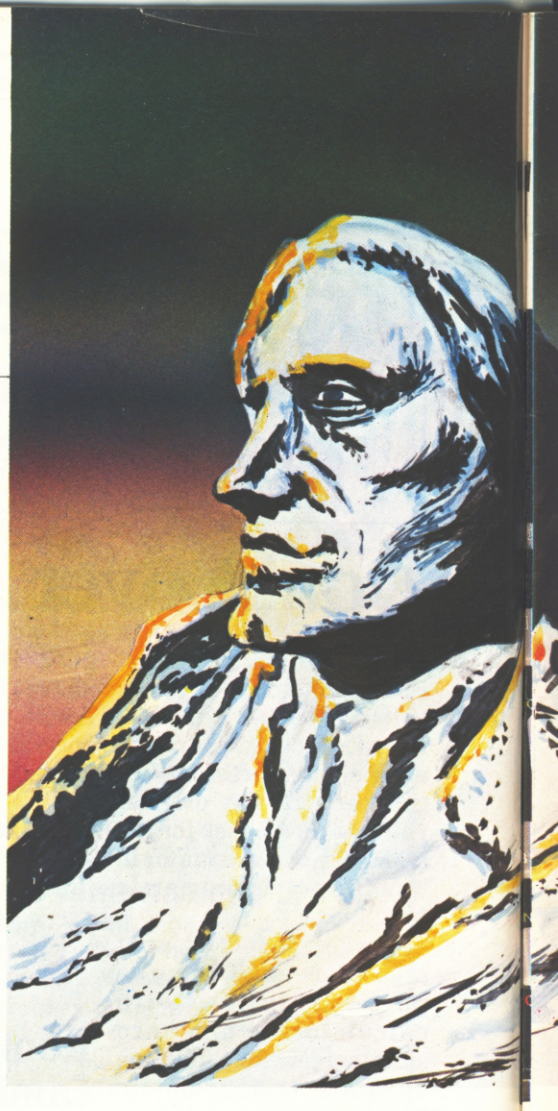
Michael Jones.

Delivery difficulties

I SOMETIMES have problems obtaining *Sinclair User*. Could you inform me where I can buy it?

John Durant,
Lowestoft, Suffolk.

● *The best way is to take an annual subscription. Alternatively you can order it from your newsagent, quoting our ISSN number, 0262-5458.*



Clive Sinclair gives his views on the future of the Western civilised world to a British Mensa symposium in Cambridge

Computers will bring a new Golden Age

AS WELL as being head of Sinclair Research, Clive Sinclair is chairman of British Mensa, an exclusive club whose members have IQs which reach the genius level.

In a speech at the Mensa Golden Ages symposium at Cambridge, Sinclair outlined his ideas for the future, not of his range of personal computers but of the Western civilised world. He said: "I intend arguing that the most Golden Age of man's history may well lie before us, if we can only move in the right direction."

The new age would need to be triggered by an event which will startle society. The trigger, Sinclair explained, would be something similar to the invention of writing or moving type. He said: "Both of those developments reduced the cost of data transmission by a factor of 100."

He saw leisure, or periods of time not occupied by formal work, as an opportunity to broaden the mind. If the trigger occurs at the proper time and the Golden Age arrives "the body of men arises which can turn its attention to matters other than necessities. Thus wealthy patrons produce the great flowerings of arts which are a feature of the Golden Ages.

"Equally, the Golden Ages are often marked by one great individual, a type of philosopher-prince, e.g., Pericles, Augustus, Lorenzo de Medici, Elizabeth I and Louis XIV."

In business operations, Sinclair seems to regard the personal approach best. One man at the head of a company. He has stressed that approach many times through Sinclair Research, so that now he is as famous as his machines, whereas other manufacturers remain masked by their company exteriors.

During his speech Sinclair referred his ideas to the present day. He saw the Golden Age as being very close. Some of the features which marked the Golden Ages of the past could be identified within our time. That could place us on the threshold of a new Golden Age. To demonstrate it, Sinclair returned to the idea of a trigger.

"Is there a trigger? It so happens that another hundred-fold reduction in the cost of data publication and transmission is about to occur. A single 12in. diameter optical disc, being developed for use with TV can, remarkably enough, contain the information of 10,000 books and that disc will cost not much more than a few books — almost, in fact, a thousand-fold reduction in costs."

The reduction in costs and the innovations in mass marketing are compared to what Sinclair calls "the potential of the individual".

> 'I believe that our move away from the industrial type of organisation will restore the potential of the individual'

Until now, society has accepted that people will work together in large groups. People work in large companies, they commute into towns and cities every working day. That massing of the working population is the motive force behind the present state of the economy.

Sinclair said: "We have for some time been passing through a great industrial age in which the economic basis of society has demanded the bringing together of people in great numbers, many thousands per factory, many millions per city. I believe that our move away from this type of organisation will restore the potential of the individual."

Individual human potential is something Sinclair seems largely to favour. While Sinclair Research is a company, like many others, where everyone pulls together, it is still mostly a one-man operation. Sinclair is the man who defines what he wants and lays-out the time-table for its development.

That style of operation has so far proved successful, first with the ZX-80 and ZX-81 and now with the Spectrum. The hundreds of firms

Lorenzo de Medici, Elizabeth I and Louis XIV were patrons of earlier golden ages. Will the computer be the patron of the next?

which give support to Sinclair microcomputers would also seem to prove his point to be correct.

Sinclair sees the new Golden Age as being a time of the mind, with less stress put on the body and building culture rather than labouring. He feels that another Golden Age requirement is an abundant supply of patrons, people who can appreciate, as well as create, art.

"We have a well-educated population, a society which reveres the arts, and have become a world centre for music and for the written word."

The reason for the swing towards cultural pursuits is marked with the stigma of a current curse on society.

Sinclair said: "We have potential artists, partly for the sad reason that we have three million unemployed; this is not a passing phase of recession but a trend which will last until the end of the century, during which I expect the manufacturing industry to shed a further seven million jobs and for the proportion employed in manufacturing to decline from some 42 percent of the population to less than 10 percent. This will occur as automated systems are now radically cheaper than manual costs."

The resulting factors of unemployment due to technological innovation and automation will leave the population with a lot of spare time if present trends continue. If the number of unemployed rises to more than 90 percent it may be necessary to redefine the term altogether.

The type of work people do would change drastically. A new concept of work would have to be created. That is where culture and the processes of the mind would enter. People would have more time to learn and so understanding of many areas of science would improve.

"We must change the pattern of expectation — no longer to prepare people for a life-time's work in major organisations but to give them the self-reliance for a broader role in smaller groups.

"Many, if not all, of today's young people will always work for small organisations and indeed must found them. We must encourage people to follow this route if we are to create future employment — whether in high technology, in a revival of a class, or in service industries."

Sinclair foresees a new 'creative endeavour'. People are experiencing new technology, seeing what it can do for them. It can relieve them of manual tasks so that they can use their minds more fully.

Young people were just beginning to learn about new technology. According to Sinclair, the learning process would only be the beginning. Learning the techniques of putting ink on to paper was only the beginning of writing creative prose and poetry — learning to communicate successfully. Learning about new technology through machines such as the ZX-81 and the Spectrum which, because of low prices, were within the reach of nearly everybody, was the beginning of a process which may lead to what Sinclair believes is a new Golden Age.

"Because we no longer need to devote the bulk of our time to the production of objects, I can see the plateau of a Golden Age before us. Certainly we may need inspiration and leadership, great building, a bridge over rather than a tunnel under the Channel.

'Early in the next century we will have made intelligent machines ending for all time the pattern of drudgery'

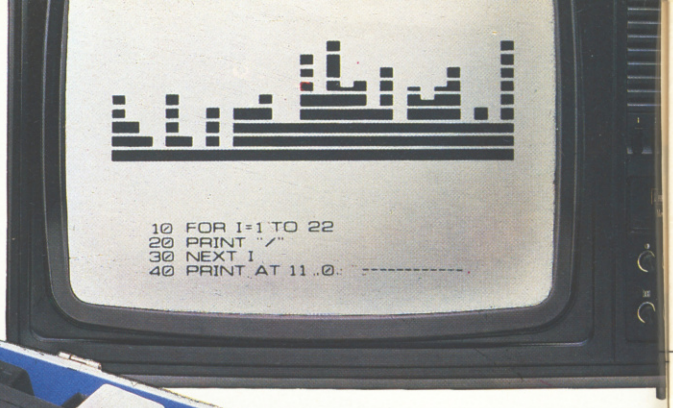
"Early in the next century we will have made intelligent machines ending for all time the pattern of drudgery — with them we can start the exploration of the universe. It may be that Western civilisation, seeded in seventh-century Ireland is only just about to flower."

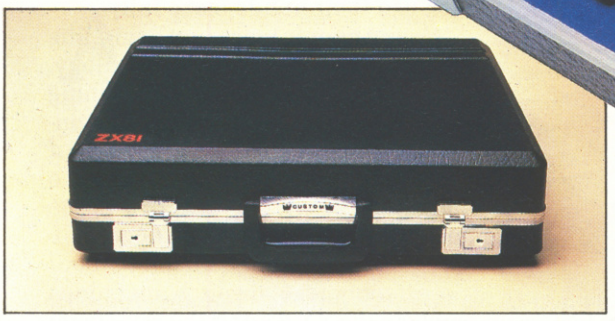
To some, Sinclair's ideas may seem like science fiction but some cynics said that a machine like the Spectrum was not possible only last year.

Use your computer in the case...
Foam rubber gives complete protection...
Purpose-built for the ZX system...

ZX81 & Spectrum Custom Cases.

Just £34·95 (+P&P) each.





Turn your ZX system into a portable computing centre!

Your ZX hardware – ZX81 or Spectrum – is designed to work together as a system.

And now there's a simple way to make the most of the fact.

The portable computing centre in a briefcase.

A ZX Custom Case holds all your hardware in the most ergonomically sensible positions for easy operation. Each piece of equipment is gripped securely by shock-absorbing foam. Each connecting lead fits under the foam, so there's no chance of tangles. And as each piece is held firmly, connections are excellent.

You can forget wasted time setting up or unhooking the system, too. When you've finished, simply tuck in the mains and TV leads and replace the hinged, lift-off lid. And of course, if you're taking your ZX system to college or the office, ZX Custom Cases are a lot less cumbersome than a bag or rucksack. And a lot more protective and professional.

Designed by ZX enthusiasts – for ZX enthusiasts.

Both the ZX81 and Spectrum Custom Cases were designed by a group of ZX system users and manufactured by Britain's leading case makers. Made from impact-resistant ABS, each case holds every piece of Sinclair hardware available for the respective computers – plus Learning Lab, manual, software cassettes and any cassette player up to 10½" x 5½". If you haven't all the hardware, simply leave the pre-cut foam in position, then remove it as you get extra pieces of equipment.

And when brand new hardware is introduced, or you upgrade from ZX81 to Spectrum, simply contact us for a replacement foam insert for just £4.95 (+p&p).

Send for your ZX Custom Case – now!

ZX81 and Spectrum Custom Cases are guaranteed for two years, and cost just £34.95 (+p&p) each. Remember you could pay more for an ordinary briefcase.

To order, simply use the FREEPOST coupon. Or if you have a credit card, telephone 0276 62155, Mon-Fri, 9.30-5.30.

ZX Spectrum Custom Case now available!

Zeta software aims at schools

SOLENT SOFTWARE Engineering Ltd, of Brookvale, Waterworks Road, Otterbourne, Winchester S02 2DP produces the Zeta range of educational software, which Solent states has been fully-tested and developed by middle school teachers in Hampshire.

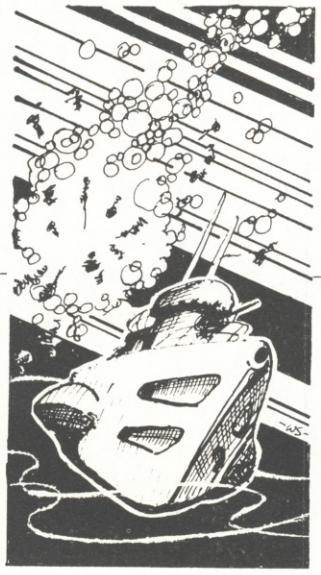
Eight titles were provided for review, on high-quality cassettes which ensured first-time loads; 16K RAM is required.

Each program is literature-supported with comprehensive operating instructions, a description of the game, how it works, what it does, and how to restart it after a break. Full marks for such a good documentation.

Graphs draws bar charts of the class birthdays. It ran well and, like all the other Zeta programs, is very robust. I would, however, have liked to see a more general graph-drawing program, with provision for copying the results to a printer.

Depth Charge and **Zilog** are ordered triple (X,Y,Z) and ordered pair (X,Y) co-ordinate games. In Depth Charge, a submarine has to be hunted while in Zilog an incoming spaceship must be destroyed. The games are good but the graphics displays could have been a little larger.

Spell Invaders tests words set by a teacher, up to a limit of 10. A word is displayed, then blanked-out; the child has to "spell" it by shooting letters of the alphabet, Space Invaders style. Three incorect letters only are allowed.



It is a very good game, which would have been even better with some means of printing-out a certificate with name, score and words tested on it.

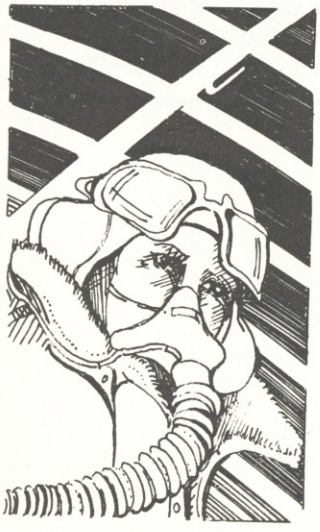
Oxo-, Oxox and **Oxo+** are simple mathematics games based on noughts and crosses, with sums displayed on the board, two children playing against each other to win the game by solving the problems and thus getting a row of their symbols. The only trouble with the game is that you may have difficulty getting the children using it to let someone else do so.

Reaction Test is a computer familiarisation game in which letters are displayed and the appropriate keyboard letter has to be pressed. The response of the children is timed.

At £5.75p each, or £42 the set, these may seem a little expensive. That is not so. Solent Software states in its literature that "where the original purchaser is a school or college, additional copies of the programs may be made for use on other computers only within the said school or college."

Considering that they worked well, and taught specific things, the set of programs would be a good addition to the software library of any school, Particularly as you would not have to rely on only the one set of tapes.

Flights of fancy from Hewson



BUDDING AVIATORS can test their skills with the Hewson Consultants **Pilot** — not a game but a flight simulation program. There are seven modes — including landing, heading towards a beacon, taking off — and points are awarded for correct execution of each manoeuvre. Tired pilots can choose the Autolanding mode, in which the computer does everything for you. Non-fliers abstain.

The same firm also offers an above-average maze game called **Puckman**. You must imagine you are a small humanoid scouring the maze for magic strawberries which keep at bay the monsters trying to devour you. There are many monsters to make it exciting and you can work up a good speed dodging round the corners.

Both cassettes are on 16K, costing £5.95 each, and are available from Hewson Consultants, 60A St Mary's Street, Wallingford, Oxon OX10 0EL.

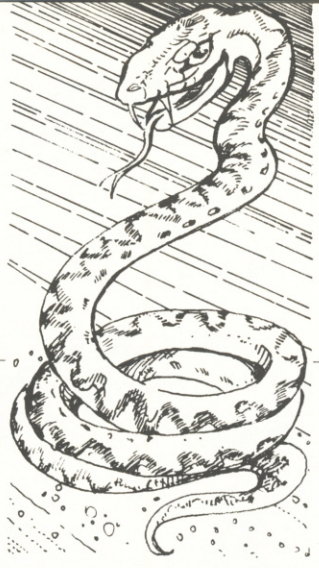
Byte Man in the Mindseye

MINDSEYE offers good value with three games on one 16K cassette for £2.95. The title game is **Byte Man,** in which a cheerful-looking monster chases you round a maze littered with food pills. The aim is to score points by eating the pills before the monster — and his brothers and sisters — eat you.

You have three lives and the computer will enter your score, so several people can play.

Space Fighter is a fast-moving shooting battle against swarms of enemy spacecraft. You will need quick wits and fingers to obtain a high score. Finally, **Bomber,** a simple, absorbing game, in which you have 30 bombs to destroy a dam. Different parts of the dam are worth

continued on page 18



continued from page 17

varying numbers of points, so some careful planning, as well as accurate bombing, is needed to improve your score. The Byte Man cassette is obtainable from Mindseye, 12 North Grove Drive, Leeds, W. Yorkshire, LS8 2NJ.

Episode 4 by Michael Orwin

MICHAEL ORWIN has built a reputation for value-for-money software and his Cassette 4 offers quantity as well as quality. There are eight games on the cassette, seven of which are in machine code and six of them are arcade-type games.

Guns is a marvellous moving graphics version of the Gunshooter game, for one or two players. Bullet speed and skill level can be entered and each gunslinger has six shots per round. In the one-player game, the computer would give Clint Eastwood a run for his money.

ZX-Scramble is another arcade game; you try to manoeuvre your ship through a cave while bombing the enemy and shooting their defending fighters. Ever-popular **Invaders** and **Galaxy Invaders** are on the cassette, along with **Life, 3D-Tic-Tac-Toe, Fungaloids** — a moving graphics bombing game — and **Snakebite**, an original graphics chase game which can be tailored by the player.

Cassette 4 costs £5 from Michael Orwin, 26 Brownlow Road, Willesden, London NW10 9QL.

Roll over, Beethoven

V. HAYNET of Streatham produced an entertaining program called the **Multi-sequencer**. It has one major disadvangage — its almost incomprehensible instructions.

Once loaded, each key plays a different tune, part of a tune or sound effect. The sound effects are mainly space or laser gun-type noises and the tunes range from a bit of Beethoven to *Star Wars*. The sound quality is similar to that of a Casio-tone organ.

It is also possible to make keys play a tune of your own composition; and, if you decide the second note of *Sailors' Hornpipe* should be F sharp, it is possible to change it.

This machine code program which loads first time compares favourably to other similar programs on the market. It is available from V Haynet, 10 Ashlake Road, Streatham, London SW16.

PSS

PERSONAL SOFTWARE SERVICES, 112 OLIVER STREET, COVENTRY CV6 5FE.

ZX-81 OWNERS — YOU CAN NOW

LOAD/SAVE 16K IN 29 SECS

WITH THE INCREDIBLE QSAVE PACKAGE FROM PSS

* Verify successful saving of programs * Compatible with your existing recorder
* No hardware modifications needed * No extra power supply necessary
* NO MORE WASTED TIME WAITING FOR PROGRAMS TO LOAD OR SAVE

QSAVE comes in two parts: **A HARDWARE** — simply plug the QSave amplifier/filter between your existing tape recorder and the ZX-81 (all leads supplied).

B SOFTWARE — load the QSave cassette before you load a tape or key in a program. You can then save and reload a full 16K (including RAMTOP) in only 26 seconds. I.E. A data transfer rate of 4000+ BAUD compared with only 250 on the standard ZX-81.

QSave also gives your ZX-81 a verify function just like the Spectrum which allows you to check that your programs have saved properly.

REVOLUTIONISE YOUR PROGRAMMING NOW FOR THE ALL INCLUSIVE PRICE OF £15.95

Make cheques P/O's payable to PSS. Full money back guarantee. Normal delivery within 7-14 days.

ZX SOFTWARE FROM PSS

We also have the widest range of high quality software for the ZX-81 available anywhere. Whatever your needs we have the program for you. From a superb version of Puckman to a compiler of a complete Word Processor package — you need look no further than PSS. In addition, all of our software is available through the ZX Software Library. For a once only payment of **£5.50** you can have any five of our packages (**£10** for ten). You take one tape at a time and make your own copies — save yourself £'s on list prices. Send 2 first class stamps for a fully detailed catalogue of all our products.

dk'tronics ZX 80/81 SPECTRUM Hardware Software

ZX KEYBOARD

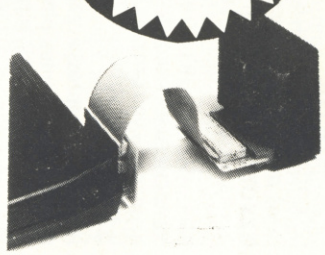
The case is large enough for both the computer (81 or Spectrum) and the power supply to fit inside. **Requires no soldering**

Fully cased with numeric pad £45
Uncased with numeric pad £30
Case £15

SPECTRUM MEMORY UPGRADE TO 48K £39.95

NEW FROM dk'tronics

(A) 16K Ram Massive Add On Memory
Fully assembled and tested £19.95
(B) 64K Memory Expansion £49.95
(C) 4K Tool kit full of utilities to aid the programmer in constructing and de-bugging E. Prom version for use with graphics Rom £9.96
Cassette version £6.95
(D) Flexible ribbon connector (as illustrated) £10



The DK Graphic module is our latest ZX81 accessory. This module, unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you an unbelievable 448 extra pre-programmed graphics, your normal graphic set contains only 64. This means that you now have 512 graphics and with their inverse 1024. This now turns the 81 into a very powerful computer, with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there; it also has a spare holder on the board which will accept a further 4K of ROM/RAM. This holder can be fitted with a 1K/2K/RAM and can be used for user definable graphics so you can create your own custom character sets.

£29.95

NEW. SOFTWARE SUPERMARKET

YOUR ONE-STOP POSTAL SHOP FOR ALL THE BEST ZX81 PROGRAMS. FROM £4.50.

Now you can order the very best ZX81 programs with just one postage stamp. We've started SOFTWARE SUPERMARKET to make it easy for you to buy more programs. And, to help you choose, we've selected the games we've enjoyed most: games that give lasting pleasure, games that stretch the ZX81.

All games need a ZX81 with 16K Ram.

1. MAZOGS. (Bug Byte). £9.95. "Great," said Popular Computing Weekly "a grossly addictive game." We agree. It's a maze game with great graphics. You'll really feel you're running through the maze, sword in hand. 3 different variations on this one tape. Great value.

2. ZUCKMAN. (D.J.L.) £5.95. "Very user-friendly...a fast and interesting game." (Sinclair User). A very good version of the famous arcade game. If you're skillful, your name and score are displayed in the Zuckman Hall of Fame for your friends to admire.

3. 3D MONSTER MAZE. (J.K. Greye). £4.95. "The graphics are incredible...and the game is very good indeed." (ZX Computing.) Until you've seen the full-screen tyrannosaurus rex chase you through his 3-D maze, you won't believe it either.

4. 3D DEFENDER. (J.K. Greye). £4.95. "Amazing 3-D graphics effects are created as the enemy draws closer...another winner." (Sinclair User). Watch through your spacecraft windows as the alien craft attack in astonishing 3-D detail.

5. TRADER. (Pixel) £10.50 The most astonishing graphics as you travel round 6 planets. This is a 48K game but only needs 16K Ram. The print-out alone is 6½metres long! Usually starts with a 25-second Test load.

6. THE ZX ARCADE PACK. (Control technology). £4.95. A brilliant collection of fastmoving machine code arcade games. Two kinds of invaders, one traditional, the other swooping, soaring Galaxians. Plus 6 more games, including a great graphic. Astonishing value.

7. VOLCANIC DUNGEON. (Carnell). £4.50. One of the great adventure games. Rescue the princess, if you can. It took us 3 months – and we never got bored... Fast, single-key entry: map included. PLUS a good graphic HANGMAN game: 400 word vocabulary (or enter your own words). Our children's favourite.

8. THE DAMSEL AND THE BEAST. (Bug Byte). £6.50. Another exciting adventure. Find the damsel, then kill the beast (club and torches provided), lead the damsel out before she starves. But wait until she screams... 3 game variations.

9. ZX OTHELLO. TM (M.o.I) £6.95. "Recommended without reserve... it is a superb opponent." (Your Computer). The classic board game in its very best computer form. You'll see plenty of 'Reversi' listings, but this program makes it as challenging as chess.

10. ZX CHESS II. (Artic). £9.95. "The seemingly impossible has happened – you can play high resolution chess on a Sinclair." (Card V.G.) The strongest ZX81 Chess Game around. All legal moves: 32 opening moves: 7 play levels – 4 within competition time limits. (Full Board Graphics available with Quicksilva CHR Board).

To order these games, please complete the coupon.
ADDRESSES ABROAD, please add 20p per £ for extra p&p.
PROGRAMMERS! If you would like us to evaluate your software for possible future inclusion, please send cassette, price list.

POST TO: SOFTWARE SUPERMARKET, 87 Howard's Lane, London SW15 6NZ.
I have a 16K ZX81. Please send me the programs indicated below.
I enclose a cheque/PO for £ (total order value) made payable to Software Supermarket.

Sound booster for Spectrum

THE TELESOUND 82 audio modulator by Compusound can make a great difference to the Spectrum. The Spectrum has a built-in loudspeaker but the reproduction can be so faint that it cannot be heard except in a very quiet room. The Telesound 82 amplifies the sound by sending it with the video signal to the TV set, where the amplifier and loudspeaker can make that small sound deafening.

All sounds produced by the loudspeaker can be reproduced, from the BEEP command to the click sound emitted from every key. There are only two connections to make inside the Spectrum, one to each of the two wires going into the video modulator, and that is achieved by crocodile clips.

The jack plug provided is then plugged into the EAR or MIC socket and the unit is in use. You can obtain the Telesound 82 from Compusound, 32 Langley Close, Redditch, Worcs., price £9.95.

Haven has 16 colours

HAVEN HARDWARE has produced a colour board for the ZX-81 which can provide up to 16 colours for each of the character squares. The colours are POKEd into the top part of the 16K memory into 1K of on-board memory which retains the colour.

The position in memory varies with the movement display file and so must be calculated every time it is POKEd.

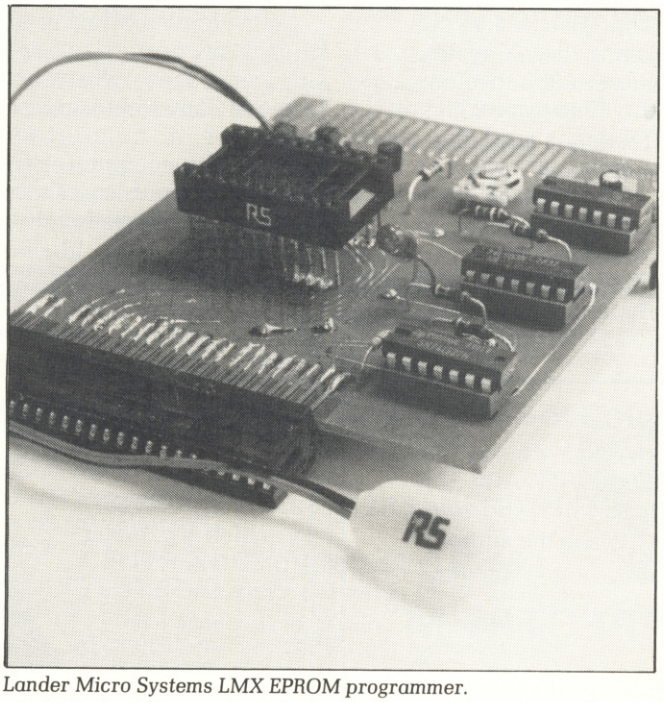
Only one internal connection has to be made, as all the other signals are obtained from the expansion connector. More details can be obtained from Haven Hardware, 4 Asby Road, Asby, Workington, Cumbria CA14 4RR. The cost of the colour board is £39.95 as a kit and £49.95 as a ready-built unit. All prices include VAT and postage.

Video inverter rests on VLA

D FRITSCH has produced a video inverter kit for the ZX-81 which rests on the ULA and it requires only four connections to the ZX-81. Two of those connections are made to the power supply and the other two are obtained by soldering a wire to each side of a break which is made in the video lead going into the video modulator.

The video signal is also made sharper on the TV screen by the use of an amplifier instead of the usual integrated circuit gates. A switch is provided — with a template for cutting the hole in the back of the ZX-81 — for switching between normal and inverse video as the tape LOADing and SAVEing cannot be seen so clear in inverse video.

The price in kit form is £4 and for £7.50 the unit will be fitted to your ZX-81 for you, including VAT and postage. Contact D Fritsch at 6 Stanton Road, Thelwall, Warrington, Cheshire WA4 2HS.



Lander Micro Systems LMX EPROM programmer.

Programmer for EPROM

LANDER Micro Systems has produced an EPROM programmer for the ZX-81, called the LMX. Using a printed circuit board which plugs into the back of the ZX-81, the programmer can be used as an EPROM card containing 2K of pre-programmed memory (ROM) or to re-program a 2716-type EPROM.

To re-program an EPROM it first has to be treated with ultra-violet light to clear all the bits to 1s. It is then inserted into the board and a 36V supply made up from four PP3 batteries — not provided — applied.

A special keyboard overlay and program tape is provided which will allow you to step through the addresses in the EPROM and change them. The device covers the whole of the 8K-16K memory space. The LMK system as a kit costs £17.50 including post and VAT from Lander Micro Systems, 32 Clockhouse Lane, Collier Row, Romford, Essex RM5 3QJ. Tel: Romford 26325.

Toolkit from Orme

ORME ELECTRONICS has a 2K EPROM which contains a Toolkit for a ZX-81. The EPROM card which takes the EPROM can be bought separately from the EPROM at £9.25. The card contains one socket for the EPROM and an extension board to plug in other equipment like the

continued on page 22

continued from page 21

16K RAM pack at the back.

The Toolkit contains routines such as re-number, block delete, hex-to-decimal conversion and vice-versa, READ-DATA and load machine code from tape.

The EPROM also contains a fast version of the games of **Life** and **Breakout.** All this costs £9.25. Contact Orme Electronics at 2 Barripper Road, Camborne, Cornwall. Cornwall.

Custom Cases packaging

CUSTOM CASES packs all your ZX-81 or Spectrum equipment into one portable briefcase, 19in. × 14in. × 4½in. The case is filled with polyurethane foam and has cut-outs for the computer, printer and RAM pack and, when it arrives, the ZX Microdrive.

The foam is covered with a red nylon finish and looks very attractive as well as useful in the aluminium-framed, plastic-covered briefcase. The case is lockable and keeps the ZX system neat, tidy and ready for use at any time by plugging-in the TV leads and the power supply.

The cost of the case is £36.95, including VAT and postage, from Custom Cases, Custom House, Britannia Road, Waltham Cross, Herts.

Cobra brings out interface

AN RS232 interface for a printer is available from a new company specialising in ZX equipment, Cobra Computer Services, at a cost of £30. It works from the ZX power pack and can be used with most RS232 printers to produce graphics and text.

Cobra is also offering a business consultancy service for those who want to use a ZX machine on the basis of a computer system. The company will be able to put together packages for users involving disc systems hi-res graphics and printers at low cost. Contact Cobra at 378 Caledonian Road, London N1 1DY (mail order only) for a brochure, enclosing a SAE.

Expansion for the Spectrum

EAST LONDON Robotics has produced a 64K add-on RAM board for a 16K Spectrum costing £50. It fits inside the Spectrum in the sockets provided for the Sinclair 32K board. The RAM is in two banks of 32K and is switched over by an OUT instruction. LEDs indicate which block is in use.

Contact East London Robotics, Finlandia House, 14 Darwell Close, East Ham, London, for your 80K Spectrum. Tel: 01-471 3308.

New Generation Software

PROFESSIONALLY WRITTEN & PRODUCED SOFTWARE FOR THE HOME COMPUTER

ZX99 AUTOMATIC TAPE CONTROLLER FOR THE SINCLAIR ZX81

● DATA PROCESSING

The ZX99 gives you software control of up to four tape drives (two for reading, two for writing) allowing merging of data files. This is achieved by using the remote sockets of the tape drives, controlled by USR statements or commands.

● RS232C INTERFACE

The ZX99 has an RS232C output allowing connection with any such printer using the full ASCII character code (you can now print on plain paper in upper or lower case, and up to 132 characters per line) at a variable baud rate up to 9,600

● SPECIAL FEATURES

There are so many special features it is difficult to list them all, for example:

AUTOMATIC TAPE COPY: You can copy a data file regardless of your memory capacity as it is processed through the Sinclair block by block.
TAPE BLOCK SKIP: Without destroying the contents of RAM
DIAGNOSTIC INFORMATION: To assist in achieving the best recording settings.

The ZX99 contains a 2K ROM which acts as an extension to the firmware in the Sinclair ROM. The ZX99's ROM contains the tape drive operating system and the conversion to ASCII for the RS232C output.

There is an extension board on the rear to plug in your RAM pack (larger than 16K if required). The unit is supplied with one special tape drive lead, more are available at £1 each.

~~£59-95~~
NOW REDUCED TO
£49-95
+ £2.95p+p

● ZX99 SOFTWARE

We now have available "Editor 99", a quality word processing program including mail-merge, supplied on cassette for £9.95. Also following soon:

* **Stock Control (October)**
* **Sales Ledger (November)**
* **Business Accounts**
* **Debtors Ledger**
* **Tax Accounting**

SPECTRUM GAMES Two 16K programmes on cassette

AIRPORT This could be a nightmare! As a member of the airport groundstaff your task is to assist in the successful landing of an aircraft but beware, there are many obstacles in your path!

ALIEN Search for the alien hiding in the maze of air ducts on the spacecraft. Your only weapon is a flamethrower, so progress carefully as success relies on your skill and judgement.

Full animated instructions included with each game

BOTH ON ONE CASSETTE FOR ONLY £4.95

BATTLESHIPS & CRUISERS 16K - ZX81

First computer version of this popular game of strategy and tactics. Both grids on view together. Establish the position of your fleet then locate and destroy the computer's fleet. Visual display shows hits and misses made and gives running score.

ONLY £4.95 ($9.90)

GRAPHICS TOOLKIT 22 exciting MACHINE CODE routines that give you control over your screen as never before!
(ZX81 - 16K RAM ONLY)

Draw/Undraw
Foreground On/Off
Border/Unborder
Fill screen
Reverse screen
Print position controls - UP, DOWN, LEFT, RIGHT
Editprint - moves next PRINT position to first edit line.
Scroll Facilities - UPSCROLL, RIGHTSCROLL, LEFTSCROLL.
Onscreen/Offscreen
Background On/Off
Search and replace
Square draw

All these routines are in machine code for SUPER-FAST response! GRAPHICS TOOLKIT uses only 2K of your RAM and that includes space to load the programmer's TOOLKIT described below.

ALL FOR ONLY £5.95 ($11.90)

An ESSENTIAL addition to your 16K RAM ZX81

TOOLKIT Provides the following additional facilities

Renumber - including GOTO's and GOSUB's
Search and list
Search and replace
Free space
Hyper graphics mode
Fillscreen
Reverse screen
Tape wait
All these routines are written in machine code and together take up only 1K of your precious RAM - an incredible achievement!!

FOR 16K - ONLY £4.95 ($9.90)

NEW

16K SPECTRUM + £42.50 = 48K SPECTRUM

We did it for the ZX81 - we've now done it for the ZX SPECTRUM! Add on memory at an amazingly low price. Increase your 16K to a massive 48K with the

32K RAM BOARD

Using fewer components on a high quality double sided board to give you top performance, reliability and economy.
You can carry on writing larger programmes in sections ready to MERGE when your extra 32K RAM BOARD arrives within 21 days.
Installation is simple - the entire fitting is completed in just a few minutes (with the aid of a screwdriver - NO SOLDERING!)

ONLY £42.50

FOR 16K SPECTRUM - ONLY £42.50

19 WAYSIDE AVENUE, WORTHING, SUSSEX. BN13 3JU Telephone: (0903) 65891

Come to the ZX-81 with a clear mind to make the best use of your new machine.

A lifetime's obsession can easily be acquired

BUYING a ZX-81 can be the start of a lifetime obsession with home computing. It is easy, however, to become discouraged if everything does not go to plan from the beginning.

For those with only a little knowledge of computers and their capabilities, the best way to approach the ZX-81 is to abandon any ideas for special uses. While the basic machine is ideal for learning how to use computers, it is too small for any major uses. It is better to become accustomed to the many facilities and then decide how you wish to use them.

Begin by unpacking the machine, overcoming your surprise at its size and weight and, following the manual, set up the system. If you cannot get the K on the screen, check that everything is plugged into its correct socket and re-set the machine by pulling-out the power plug for a second and try tuning-in again. If still nothing appears, check the power supply unit by shaking it. If it rattles, return it. If it is satisfactory, check your system with that of a friend.

Once the K appears you are ready to begin learning about the ZX-81. It can save family arguments if you can afford a separate television set for your system. It also makes life easier if you can find somewhere to leave your equipment set up permanently. You will find that a few power sockets are needed and a four-way block connector on a short length of extension cable will help to tidy trailing leads. The manual is written in great detail and is reasonably easy to follow. Some of the chapters may not seem immediately relevant but it is worthwhile reading them as you might miss something which is important.

Patience is needed at that stage to learn the ways in which the computer will accept information. It is tempting to try to enter programs before you are really ready but that is likely to lead to errors. For example, words like AND, THEN, and AT should not be typed-in letter by letter. By the time you have reached chapter 11, you should have accumulated sufficient knowledge to be able to type-in other people's programs, such as those in *Sinclair User* and *Sinclair Programs*, without too much difficulty.

It is important that when using the machine it is not jolted. Some of the connections can easily work loose and everything which has been put in will be lost.

The manual is not to everyone's taste and if you find it difficult to follow, a number of books on the market can help you. Find the one which suits you best.

As a way of relaxing, you can buy some of the growing range of commercially-produced software. That can be loaded directly from cassette but make sure that your machine is big enough to take the tapes you buy. There are some programs for the unexpanded 1K machine but most of them require a 16K RAM pack. The tapes vary in quality. It is advisable to read the reviews in *Sinclair User* and use your judgment to find the best.

An alternative method to learn about the ZX-81 is to plunge in at the deep end and see what the computer will do. Refer to the manual when you have difficulties. You can ignore the functions and calculations initially and experiment with PRINT statements to obtain the feel of the machine.

You may have heard already about the problem involved in SAVEing and LOADing your own cassettes. The manual again gives detailed instructions but many of the early machines would not accept tapes from some recorders. That problem is said to have been overcome but there can still be difficulties.

They usually occur when LOADing tapes recorded by other people. One simple method to overcome this is to wind the tape to the middle of the program and type LOAD" " followed by NEWLINE; then slowly increase the volume of the recorder with the tape running until the television screen shows four or five thick horizontal black bands. If you then re-wind the tape, the program should LOAD normally.

Finally, a health warning. Apart from any practical uses, computing with your ZX-81 can be a very entertaining hobby and is almost certainly habit-forming. You may easily find yourself crouched over your machine, red-eyed, in the early hours of the morning, thinking that in another five minutes you will sort out the problem.

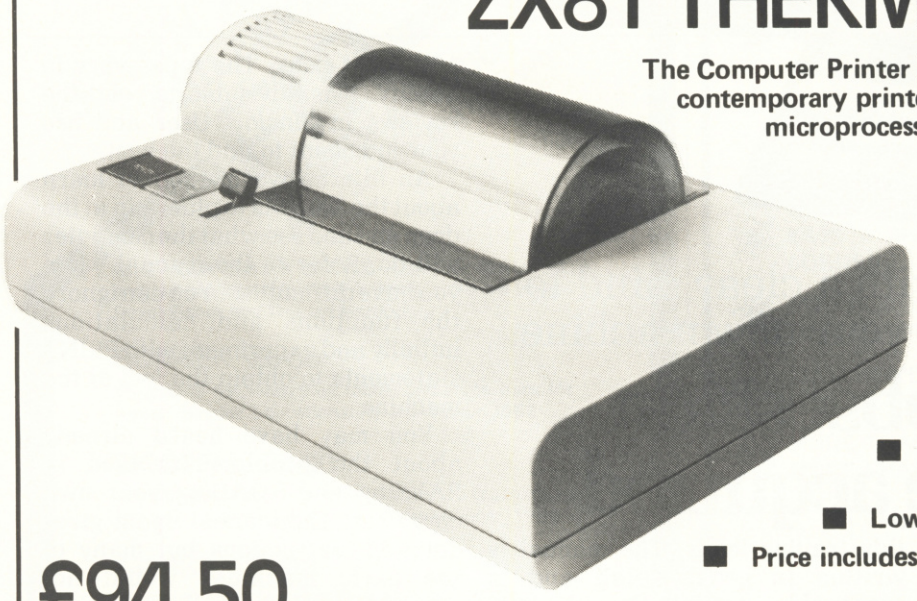
Try to break that habit by getting into the fresh air and meeting other Sinclair users.

By obtaining a ZX-81 you find that you have joined a not very exclusive club with many thousands of members, many of whom would be only too happy to advise you if you have difficulties.

Make sure of your regular copies of *Sinclair User* and *Sinclair Programs* and you can be guaranteed many happy hours with your Sinclair machine.

THE PROFESSIONAL ONE

ZX81 THERMAL PRINTER



The Computer Printer high speed matrix printer combines contemporary printer mechanism design with advanced microprocessor based VLS I control electronics and distinctive functional styling.

- **Professional high performance 40 column line printer.**

TROUBLE FREE PROGRAMMING FOR ONLY £13·95 INC V.A.T.

(+£1·40 p/p)

WITH THIS BACK-UP RECHARGEABLE BATTERY PACK AND MAINS FILTER.

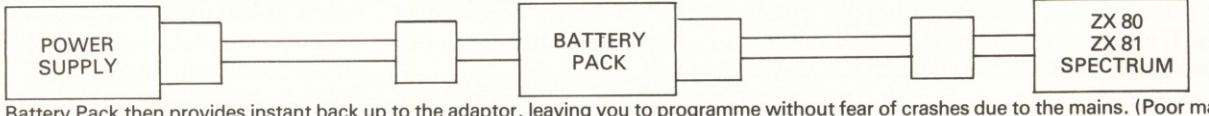
NO MORE PROGRAMME CRASHES DUE TO MAINS FLUCTUATIONS AND TRANSIENTS

If you use or programme computers you know the frustration and problems caused by sudden drops in the mains supply or high voltage transients. Hours of tedious programming can be lost in a fraction of a second.

Here at Adaptors and Eliminators, who are one of the largest suppliers of mains adaptors to the computer industry, we have developed this Rechargable Battery Pack and mains filter.

* No more programme crashes due to mains fluctuations.
* In the event of a power cut your computer will run for up to 30 mins, allowing you to record your programme on a battery cassette, or print a hard copy on your printer.
* The Battery Pack is also a useful source of 9v power, for use on radios, tape recorders etc. Use your adaptor to charge overnight.

Operation could not be simpler. Plug the lead from your ZX adaptor into the socket on the Battery Pack (male or female are provided). Then using the lead supplied connect the battery pack to your ZX Computer or Spectrum.



The Battery Pack then provides instant back up to the adaptor, leaving you to programme without fear of crashes due to the mains. (Poor mains supplies are responsible for about 90% of all programming faults).

The pack is housed in a smart ABS case and comes complete with full instructions. No wiring required — just plug it in!!

We urge you to protect your programmes
ORDER NOW — ONLY £13.95 + P/P

PLEASE NOTE this pack is suitable for all computers using a 9v supply but you may need to change the plugs.

FOR TROUBLE-FREE COMPUTING ORDER NOW. MAIL ORDER ONLY

PROGRAM PRINTOUT

MINE FIELDS

FORMULA ONE racing drivers might be able to handle our **Minefields** game for the 16K ZX-81. Your mission is to steer across 10 minefields at a dizzying speed using cursor keys 6 and 7. Cross a field successfully and you will find that your next trip will be more difficult.

We found ourselves out of breath after every excursion, because of the speed or because we were destroyed. Perhaps a little PAUSE somewhere.

Submitted by D G Lomas of Dukinfield, Cheshire.

IF THE TEST of a good program is that we cannot tear ourselves away to write the review, **Ferry** passes. It is not a complicated routine but the cursor keys produce such an instantaneous reaction that the game has a strange hypnotic fascination of its own.

The display shows one port at the top and three at the bottom. One point is awarded for each round trip and an extra ship once all the cargo — 12 loads — is transported successfully. Control the ferry with keys 5 and 8, and do not go back to an emptied quay. Sent by Michael Simmonds for the 16K ZX-81.

Graphics notes:
80 — Graphic 4.
135 — Graphic 8, inverse space.

ARITHMETIC RACE

CHILDREN will love **Arithmetic Race** and teach themselves to add in the process. It is an educational game for three children which challenges them to race against each other across the screen. Each correct answer advances their asterisk one place.

Seasoned programmers might try tightening the listing and perhaps adding a few extra graphics. Sent by Janet Whittaker of Bilsborrow, near Preston for the 16K ZX-81.

MATH MAZE

MATH MAZE is an educational program for the unexpanded ZX-81. It is a good concept. The user inputs N, S, E and W to direct D through a maze to the Exit. Along the way, there are deadly maths monsters which must be appeased with a correct calculation.

When you have reached the letter E of the Exit, the game ends with a display of the time taken. There is a great idea here. Perhaps our readers could find some way to sharpen up the graphics? Graphics notes:

100 — Seven spaces, two graphic As, inverse O, two graphic As; four spaces, graphic A, inverse O, two graphic As, three spaces, two graphic As, inverse O, two graphic As; two graphic As, inverse O, two graphic As, two spaces, two graphic As, inverse O, two graphic As, three spaces, graphic A, inverse O, EXIT; (repeat second unit); (repeat first unit).

DID YOU play **Battleships** at school? Blunt pencils gripped in grubby fingers. Hands cupped around the graph paper to prevent the other fellow from cribbing.

We have an altogether more elegant way of doing things, supplied by Michael Owen of Southport, Merseyside for the 16K ZX-81. The display shows two boards, yours and that of the computer. Press NEWLINE and enter the co-ordinates of your navy, letter first. When you have finished, the screen will be modestly obscured while the machine lays out its own battle-line.

Each side then takes turns at firing three shells into the midst of the opposing armada. You do it by entering co-ordinates as above. And England expects . . .

CALENDAR

FOR ALL witches, warlocks and wizards, we have a quick method of calculating the day on which people were born. No tongue of toad required.

Input the date — anything from 1752 to 1999 — and the computer will display the day of the week on which that date fell.

Calendar is the neatest program we have had on this subject, submitted by William Mitchell of Welton, Lincoln, for the unexpanded ZX-81. The programming is well worth close examination.

```
   1 LET M=0
   5 LET C=0
  20 PRINT "DO YOU READ THE MANU
AL?(Y/N)"
  30 INPUT U$
  40 IF U$="Y" THEN LET C=C+(RND
*6)+1
  45 IF U$="Y" THEN LET M=3
  50 PRINT "DO YOU BUY A SPANNER
?(Y/N)"
  55 INPUT O$
  60 IF O$="Y" THEN LET C=C+(RND
*5)+1
  65 IF O$="Y" THEN LET M=M+2
  67 IF C>=8 THEN GOTO 150
  70 PRINT "DO YOU SINK A TREBLE
 GIN?(Y/N)"
  80 INPUT V$
  90 IF V$="Y" THEN LET C=C+(RND
*4)+1
 100 IF V$="Y" THEN LET M=M+1
 110 PRINT "IT IS A TREMBLER SWI
TCH. WIRE 1 TO ";8-M
 112 LET A=INT (RND*8-M)+1
 115 INPUT V
 130 IF A=V THEN PRINT AT 10,10;
"BOMB DISPOSED"
 140 IF A<>V THEN PRINT AT 10,4;
"WRONG WIRE...BOOM"
 150 IF C>8 THEN PRINT AT 10,5;"
TIME IS UP...TICK BOOM"
```

YOU ARE alone in your living room, your watch at the repairers, and you discover a time bomb in the cellars. You have eight minutes to defuse it.

You have a choice of different actions, each of which will take different lengths of time and give you greater chances of survival. First, you can study a **Bomb Disposal** manual. That takes one to six minutes but gives you a greater ability to narrow the choice of wires to snip. Second, you can spend one to five minutes looking for a spanner. You will have some advantage from that. Last, quickest and least useful, you can try a treble gin.

An interesting idea though it suffers from the limitations of all purely random games. Perhaps our readers can introduce a little skill into the routine.

Submitted by Tim Grubb of Leicestershire for the 1K ZX-81.

BOMB DISPOSAL

ZX81 GAMES

from

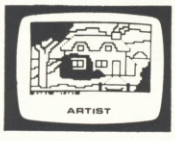
J.K. GREYE SOFTWARE LTD

THE NEW GENERATION SOFTWARE HOUSE

"Without question the finest machine code games available today.".....J.N. ROWLAND Product Manager for W.H. SMITH.

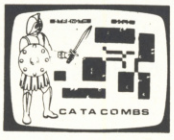
GAMESTAPE 1 for 1K _____ **only £3.95**
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER, GUILLOTINE, KALEIDESCOPE, etc.
PROBABLY THE BEST VALUE 1k TAPE AVAILABLE.

We've done in 1k, games which some of our competitors require 16k to do!



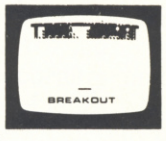
GAMESTAPE 2 for 16K _____ **only £3.95**
***STARFIGHTER** Superb machine code Space Battle. Set against a background of twinkling stars, with stunning explosions – if you can hit the enemy!
PYRAMID Can you move the Pyramid? Make a mistake and it will collapse! A Thinkers game.
ARTIST The ultimate Graphic Designers aid. 8 Directions, 10 Memories, SAVE, COPY, RUBOUT, CLS, etc.

GAMESTAPE 3 for 16K _____ **only £4.95**
***CATACOMBS** A Multi-Level Graphics Adventure. Each level can contain up to 9 Rooms, 8 Passages, 7 Monsters, Food, Gold, Traps, Phantoms, an Exit (to the next level), and there's an infinite number of levels.
NOTE. . . . This is NOT one of the necessarily limited text Adventures as sold elsewhere.
"An excellent addictive game which will keep you amused for hours.". . . . *COMPUTER & VIDEO GAMES.*



GAMESTAPE 4 for 16K _____ **only £4.95**
***3D MONSTER MAZE** The Game to Top All Others. Unbelievable Graphics! Can you find your way through the Maze? The EXIT is there somewhere, but then so is a T.REX, and its after YOU! All in 3D (the T.REX will actually run towards you in full perspective!), you've never seen anything like this before!
"3D MONSTER MAZE is the best game I have seen for the ZX81". . . COMPUTER & VIDEO GAMES
"If I had to choose just one programme to impress an audience with the capabilities of the ZX81, then J.K. Greye's 3D MONSTER MAZE would be the one without doubt" . . . . ZX COMPUTING. *"Brilliant, brilliant, brilliant!"....POPULAR COMPUTING WEEKLY*

GAMESTAPE 5 for 16K _____ **only £4.95**
***3D DEFENDER** The Ultimate Space Game. Super fast Machine Code 3D version of the Arcade favourite. You have to save your home planet from the marauding Alien Spacecraft. This is all in 3D, your viewscreen shows you the view out of your fighters cockpit window. The backdrop moves when you turn, or fly up or down (8 flight directions), just as if you were really flying it! But then YOU ARE! The Enemy Saucers will actually zoom towards you in 3D, and shoot you if you let them! Your display includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewscreen, which shows your rotating home planet, backdrop of Stars, Meteors, Explosions, Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in full 3D!
A SMASH HIT at the ZX Microfair (most of the other software houses wanted a copy), a game not to be missed!



GAMESTAPE 6 for 1K _____ **only £1.95**
***BREAKOUT** Super Fast Full Screen Display Game. Your all time favourite with an added twist. See how much Money you can win and watch the pounds convert to Dollars. All in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes and three angles of rebound! The best BREAKOUT around and at this price you can't go wrong!

GAMES MARKED * INCL. MACHINE CODE.

Spectrum MONITOR

MACHINE CODE DEBUG/DISASSEMBLER

- Enter, Run, Debug machine code programs
- Compatible with Basic
- Breakpoints & Registers Display
- Disassembly to Screen and/or ZX Printer
- Number converter – Hex/Dec/Hex
- 16K and 48K versions on one cassette + 30 page Manual.

£7.50

EDITOR/ASSEMBLER available soon – please send SAE for details

ZX-81

SCREEN KIT 1 — **MORE POWER TO YOUR SCREEN** in all your BASIC Programs

4K to 64K

£5.70

BORDERS any size, anywhere on screen. **SCROLL** in all 4 directions. **CLEAR** and **REVERSE PART OF SCREEN. FLASHING CURSOR** anywhere on screen – simulates INPUT. **DATA FILES** SAVE & LOAD Basic variables: Double Speed.

880 bytes machine code for INSTANT RESPONSE. Becomes part of Basic Program.

ZX-MC — **MACHINE CODE DEBUG/MONITOR**

4K to 64K

£7.50

COMPLETE FREEDOM FROM BASIC for machine code programmers
ENTER, RUN, DEBUG machine code. SAVE, LOAD, VERIFY AT double speed. BREAKPOINTS and REGISTERS DISPLAY. Self contained – cannot be used with Basic.
Cassette plus 36 page Manual.

REMLOAD — **MACHINE CODE ENTRY/DEBUG**

16K to 64K

£6.95

Version of ZX-MC without the Save/Load/Verify facility. ENTER, RUN, DEBUG machine code. Instantly CREATE A REM LINE of any length. Compatible with Basic. Switch between Program & REMLOAD screen displays. Breakpoints and Registers display.

computerised decision-making program

Mike Salem considers the problems of keeping information on cassettes

Finding better ways of storing on tape

THE USE of tape recorders with microcomputers is fraught with difficulties. All can be overcome, so that reliable loading and saving become routine. The tape storage and retrieval systems of all microcomputers are designed with mono portable cassette recorders in mind. What are the problems, why do they occur, and how can they be solved?

The metal head of a tape recorder has an almost invisible vertical gap in its structure. The gap is what magnetises the tape, when recording, and picks up the signal — when playing back. The gap should be truly vertical to allow interchangeability of tapes.

If tapes were always to be played back on the recorder on which they were made, it would be necessary only for the gap to be in the same orientation for both recording and playback. This would always be so if the head was never re-aligned. That is why many people can load their own programs but not anyone else's.

To use a tape recorder with programs from different sources it is imperative that the gap be very close to true vertical. This problem can be solved by having the head gap angle adjusted correctly. The way to set up a gap is to measure the output from a special test tape with an audio voltmeter, adjusting the head for best output. That is called azimuth alignment. Many tape recorders — including, surprisingly, some very expensive hi-fi machines — have poorly-aligned heads. That will cause some loss of treble, which may not be noticed on a machine with a cheap loudspeaker, with audio signals; it may cause a computer signal to fail to load entirely.

Almost all cheap mono portables have an automatic level control circuit. That circuit sets the recording level to give a reasonable output level for a very wide range of inputs. If you record a concert from near the back seat, the sound of the orchestra will be almost as loud as if you were at the front, without you making any adjustments — background noise will be more noticeable.

ALC circuits are designed for voice and music; some ALC circuits never have the recording level absolutely correct and 'fiddle' with it all the time when computer signals are used. Technically, the ALC control loop hunts. That produces a tape with fluctuating volume which may be difficult or impossible to load. You cannot blame the manufacturer of either the tape recorder or the computer — they are not compatible.

That kind of behaviour is not correlated with price or quality; the problem cannot be solved — use a different recorder. Detection is not easy — an oscilloscope can be used by the technically-minded; otherwise use a recorder known to be suitable.

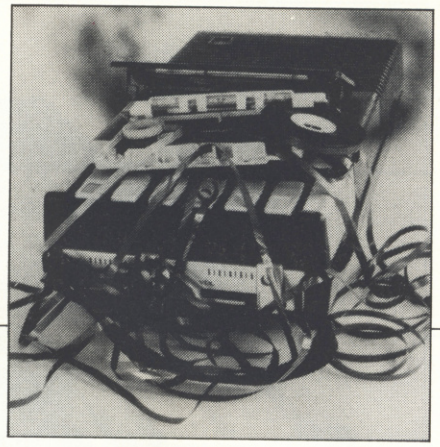
Dirty heads can be a problem. Various cleaning tapes and fluids are marketed. Rather shamefacedly, we must confess to doing no more than giving heads an occasional wipe with a dry handkerchief before they become caked.

Some machines will work with batteries but not SAVE loadable programs when running from mains. Those machines may also produce audible hum. Batteries, of course, gradually drop in voltage with deleterious effect on tape speed and signal level. Solutions are to use reasonably fresh batteries only, or use machines which operate reliably from the mains.

> 'The systems are designed with mono portable cassette recorders in mind'

Machines with stereo heads should not, in general, be used. If they must be used, use single track, rather than two-track-in-parallel mono mode. Stereo machines have

continued on page 38



continued from page 37

two head gaps, which should be aligned vertically. If the gaps are offset by a few micrometres relative to each other, the effect in mono mode is similar to a head with poor azimuth alignment.

As stereo head gap offset is not a figure which is specified by manufacturers — it is irrelevant to stereo operation — not even the best recorders can be guaranteed free of this problem.

Head wear can be a significant problem. It can even be significant in a machine used heavily for computing only. On machines much-used for general purposes, head wear should be watched for. The symptoms occur gradually and may be missed.

Performance deteriorates gradually. Bad head wear can be seen — the working part of the head becomes visibly concave, instead of following the convex curvature of the rest of the head.

In some cases — ZX-81 in particular — program corruption may occur; that is worse than straightforward failure to load, as it may be missed, and corrupted versions of the programs and data can gradually replace out-of-date, but correct, versions.

If you are technically-minded, you may be able to buy, for about £3, a replacement head. Otherwise it may be more cost-effective to buy a new recorder. Keep it for computing only, which will prolong head life.

It is worth noting that head wear shows on cassettes with foam rubber — usually dark — pressure pads long before it affects the use of cassettes with felt — usually light-coloured — pressure pads. What you may gain on the swings you lose on the roundabouts. Of course, felt pressure pads wear heads faster than foam ones. Nonetheless, we prefer felt.

Once you have a suitable tape recorder, you should be able to SAVE and LOAD your tapes without trouble. If you always use the same brand of tape, recorder and computer, you should always be able to work at the same volume control setting when loading — volume control setting is ignored by all tape recorders with ALC when SAVEing.

Loading other people's tapes is more of a problem, due to differing recording levels, quality of machines and azimuth alignment. The level-setting problem is easily solved by using a suitable monitoring device. An ordinary AC voltmeter can be used but is not ideal.

A purpose-designed loading aid is available from Hilderbay Ltd. If it is desperately important to load a tape, it is possible to mis-align your head azimuth temporarily to match the bad tape, but do not forget to put it back the way it should be. A final trick which has been known to work with tapes with a good deal of hum is to use a machine with a poor bass response. The cheaper machines are better at that.

Standard audio tape of good quality is satisfactory. Only uniformity and adherence of coating matter — noise, frequency response are unimportant. The shorter the better, all else being equal. TDK D-C46 is good.

A few comments on the use of tape recorders and tape:

- If you can save and load your own tapes but cannot load anyone else's, your recorder is probably of a satisfactory type but is in need of azimuth adjustment.
- If you can load other people's tapes but not your own, your recorder is probably unsuitable.
- If the volume setting is exceedingly critical you might find it worth trying another recorder. A loading aid will be very useful.
- If performance deteriorates, or is not so good as you know your make of recorder to be capable of, the head may be worn.
- Always re-wind tapes to keep the fragile magnetic coating out of harm's way.
- Do not use the first and last 10 seconds of the magnetised part of each tape. It is far less reliable than the rest of the tape.
- The best tape for critical applications is one of good make which you have used successfully once or twice.
- Keep tapes away from magnetic fields — motors, transformers, magnets. That holds in particular when travelling by train. Problems rarely seem to happen in the post. Airport X-rays are probably not a serious problem — we do not know for sure.
- If you cannot save and load tapes with the certain knowledge that you can load them next time, you are not getting as much from your equipment as you should.

How to choose a tape recorder. First, the tape recorder must be suitable for computer use. This feature can only be tested, never predicted from a specification. If the machine is suitable, some useful features are: mains operation; a tape counter; cue and review facility — machine plays squeakily in fast forward and re-wind modes; useful for locating programs, analysing drop-outs; it should not have a tone control — most better-quality machines have a tone control; keep it set to its maximum position.

Some frills found on a few fairly expensive machines are manual level control instead of, or in addition to, ALC; a limiter circuit in addition to manual and automatic level control; a recording level meter — very useful — mainly as a sure indicator that the signal is getting through leads and connectors to the tape recorder; variable speed playback.

'Loading other people's tapes is more of a problem, due to differing recording levels, machine quality and azimuth alignment'.

SOUND with ZX-81!

MAKE AMAZING SOUND EFFECTS WITH YOUR ZX-81

£25.95 incl p&p & V.A.T. **THE ZON X-81**

- The ZON X-81 SOUND UNIT is completely self-contained and especially designed for use with the ZX-81. It just plugs in – no dismantling or soldering.
- No power pack, batteries, leads or other extras.
- Manual Volume Control on panel – ample volume from built-in loudspeaker.
- Standard ZX-81 – 16K Rampack or printer can be plugged into ZON X-81 Sound Unit without affecting normal ZX-81 operation.
- Huge range of possible sounds for games or: Music, Helicopters, Sci-Fi, Space Invaders, Explosions, Gun-shots, Drums, Planes, Lasers, Organs, Bells, Tunes, Chords etc., or whatever you devise!
- Uses 3-channel sound chip giving programme control of pitch, volume of tones and noise, all with envelope control.
- Easily added to existing games or programmes using a few simple "BASIC" lines.

FULL instructions with many examples of how to obtain effects and the programmes, supplied. Fully Guaranteed.

16K GAMES

NEW EXPLOSIVE ZX81 (16K) PROGRAMS
AS SEEN IN THE 4TH ZX-MICROFAIR

* **3D SPACE BATTLE.** Superior Machine programming. Incredible super fast and complex 3D graphics: Alien Spaceships, Explosions, Laser beams. Destroy as many Alien Spaceships as you can and avoid their laser beams while you have energy. Full 8 direction flight control with just 3 keys. The screen is your window over an unlimited Universe background, and the enemy spaceships and laser beams come to you in full 3D.

* **ORCHESTRA.** The ZX81 plays your favourite melodies without add-ons. You don't need to know playing any instrument; just enter a sequence of note names and durations. Stores up to 3,000 note melodies on cassette. Full editing capabilities. User re-definable music notation. Perfectly tuned on A440. Allows sound over 3 octaves with semitones and pauses. Sounds through the TV speaker or an amplifier connected to the MIC output of the ZX81.

Only **£4.95** each (including airmail). Send cash, cheque or money order. Payable to **Josep-Oriol Tomas** or quote Access/Barclaycard number. Please allow up to 14 days for delivery.

Coming soon: Fast and complex true 16K ZX81 machine code arcade games. Spectrum versions. SAE for details.

ATTENTION ZX SUPPLIERS: We are interested in acquiring licensing rights to translate and market your ZX software in Spain (this is also the best way to protect your copyright), we are also interested in distributing ZX hardware and books. Samples welcome.

Great games packs for 16K ZX81 . . .

PACK 1

ASTRO-INVADERS

Just look at these features . . .
. . . then look at the price!

- Superior machine code programming
- Rapid-firing with explosive on-screen kill effect
- High-scoring saucers ●54 aliens ●accelerating attack
- Destructable defence shields ●On-screen kill count
- High score update
- Fast action space graphics

— a new dimension in ZX81 value

Astro-Invaders is yours on cassette for **ONLY £3.65** with
FOUR BONUS GAMES:
ARCADE GRAND—PRIX — drive four levels of machine code skill
PENALTY — defend your goal against the sharp-shooting ZX81
GOLF — judge your shot-strength, angles, bunkers . . .
plus machine code insect fun with **SWAT**

PACK 2

PLANET DEFENDER

— blast aliens in planet orbit . . .

- ultra-dynamic machine code action ●hostile alien-waves
- fast responsive controls; ship up/down, thrust, laser-bolt, and smart bomb
- comprehensive scoring
- explosive graphics . . . . . explosive price!

Planet Defender comes on cassettes for **ONLY £3.65** with machine code **STORM—FIGHTERS** — combat 5 fleets of swooping aliens as you blast through space, **BREAKOUT** (machine code) — race against the clock, plus **GRAPHIC HANGMAN.**

16K ZX81 cassette packs 1 and 2 are £3.65 each (post free in U.K.). Fast despatch from

Andrew Hewson.

How ZX-81 sorts out different variables

I HAVE selected just two letters this month and answered them in detail because I feel they will be of interest to everyone.

"I wish to transfer the whole of what is on the display area to a different area in memory, say at 30000, and then recall it. How can I do so?" asks Kevin Kwantes of Swansea.

The first job is to move RAMTOP down from 32768 to 30000 so that the copy of the display will not interfere with the functioning of the ZX-81. To do this enter:

```
POKE 16388, 48
POKE 16389, 117
CLS
```

A full display normally consists of 33 × 24 × 1 = 793 characters, 33 of which are the Newline character (code 118). Hence a Basic routine which transfers 793 bytes from D-FILE onwards to 30,000 will save the display. For example:

```
9010 LET D = PEEK 16396 +
  256 * PEEK 16397
9020 FOR I = 0 to 792
9030 POKE 30000 + I, PEEK
  (D + I)
9040 NEXT I
```

When recovering a previous display a little more care must be taken because if the screen has been SCROLLed the display file will be less than the full size and so it is essential to clear the screen and hence ensure that a full-size display exists before recovering the previous display. The following routine can be used:

```
9100 CLS
9110 LED D = PEEK 16396 +
  256 * PEEK 16397
9120 FOR I = 0 to 792
9130 POKE D + I, PEEK
  (30000 + I)
9140 NEXT I
```

Both these routines are slow but there is a machine code instruction called LDIR which is designed for moving blocks of data from one part of RAM to another. To use LDIR, the address to which the item is to be moved is put in the HL register pair. Then the address to which the item is to be moved is put into the DE register pair. Finally the number of bytes to be moved is put into the BC register pair and the LDIR instruction is invoked.

The following routine uses LDIR to save the display file:

Decimal	Hex	Op Code
42 12 64	2A OC 40	LD HL, (D-FILE)
17 48 117	11 30 75	LD DE, 30000
1 25 3	01 19 03	LD BC, 793
237 176	ED BO	LDIR
201	C9	RET

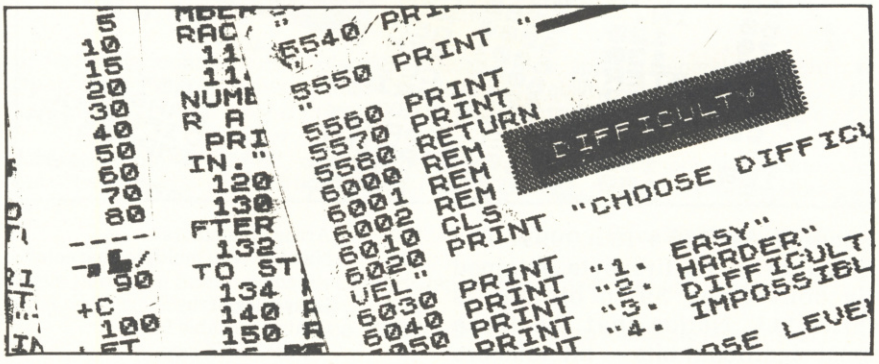
With RAMTOP set at 30000 there is plenty of room to put the routine above RAMTOP, at say 32000, by POKEing the decimal codes into each location in turn as follows:

```
POKE 32000, 42
POKE 32001, 12
POKE 32002, 64
POKE 32003, 17
etc
```

To execute the routine enter:

```
RAND USR 32000
```

To recover the display file use this routine:



Decimal	Hex	Op Code
205 42 10	CD 2A OA	CALL CLS
33 48 117	21 30 75	LD HL, 30000
237 91 12 64	ED 5B OC 40	LD DE, (D-FILE)
1 25 3	01 19 03	LD BC, 793
237 176	ED BO	LDIR
201	C9	RET

continued on page 42

continued from page 41

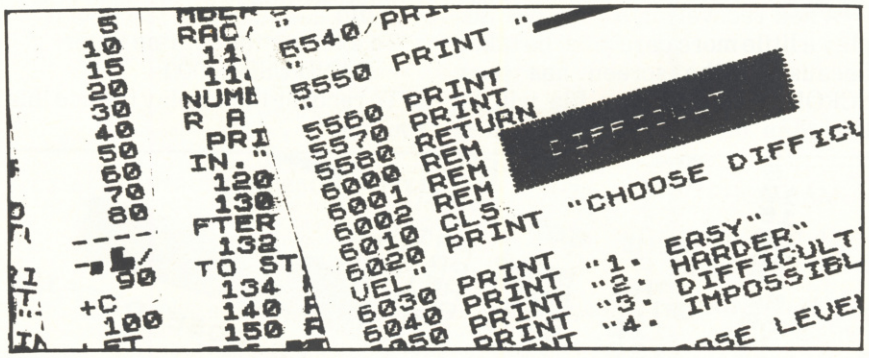
Notice that a call is made to the ROM routine which clears the screen. The routine can be loaded immediately after the save routine at 32012.

Keith Francis of Stamford raises an interesting question. He asks: **"If the ZX-81 uses two bytes to store line numbers, why is 9999 the largest line number permitted?"**

The question is very sensible. Each byte contains eight bits and each bit can take two values giving $2^{16} = 65536$ arrangements of the 16 bits in the two bytes. Hence the two bytes could be used to represent any positive integer between 0 and 65535 inclusive. Why limit line numbers to 9999?

The reason is that by limiting in this way and by manipulating the numeric codes for variables the ZX-81 has a device for distinguishing lines in the program area from variables in the variables area.

To understand the mechanism at work, consider the representation of 9999. Line numbers are held with their most significant byte first, contrary to the usual Z-80 convention, so that line number 9999 is held as a byte containing 39 followed by a byte containing 15



because 39*256 + 15 = 9999. The bit pattern of the first byte, obtained by converting 39 to binary, is 00100111. Notice that the three most significant bits — bit numbers 7, 6 and 5 are set to 0, 0 and 1 for this, the largest permitted line number. Hence bit numbers 7, 6 and 5 of the first byte of all permitted line numbers will be set to 0, 0 and 1, or in the case of line numbers less than 8192, they will be set to 0, 0, 0.

Now look at pages 172 to 174 of the ZX-81 Basic Programming manual and you will see illustrations of the different types of variables as they are represented in the variables area. In each case the first byte contains a numeric code related to the code of the letter; in the case of a number whose name is longer than one letter, the first letter, which identifies the variable. The largest possible letter code is 63, the code for Z, which is 00111111 in binary, and the smallest is 38, the code for A, which is 00100110 in binary. Clearly, bits 7 and 6 are not needed when distinguishing between letter codes and bit 5 is always set to one, so the ZX-81 uses them to distinguish between the different types of variable, subtracting 20h, or 32 in decimal, from the letter code in three of the six cases.

Three bits can be set in 2^3, or 8, different ways. The table lists the eight ways and their interpretation.

Bit pattern	Interpretation
000	Line number less than 8192
001	Line number between 8192 and 9999
010	String
011	Number with single character name
100	Array of numbers
101	Number with multiple character name
110	Character array
111	Control variable for a FOR-NEXT loop

I do not know why Sinclair should take such elaborate precautions to distinguish a line number from a variable because the same purpose could be served by comparing the address of the byte in question to the D-FILE or VARS pointers. It allows the ZX-81 to use the same routine, at 2546 to 2576, to step through memory to the "next" line or the "next" variable but that seems a small advantage.

Perhaps it is merely a hangover from the ZX-80, because in that machine the variables area follows immediately after the program area and so a device which "knows" from the contents of the byte that the end of the program has been reached serves some purpose. If any reader has a more credible explanation, I should be interested to hear it.

It is worth noting that while the ZX-81 prevents you entering line numbers greater than 9999 from the keyboard, if you manipulate the line numbers by POKEing the appropriate locations your program will still run, provided the line numbers do not exceed 16383 as the following routine demonstrates:

```
10 LET I = 10000
20 SCROLL
30 PRINT I
40 POKE 16634, INT (I/256)
50 POKE 16635, I-256*INT
   (I/256)
60 LET I = I + 1
9999 GOTO 20
```

Line numbers 40 and 50 POKE the current value of I into the locations originally occupied by 9999. If you run the program for a few cycles and then BREAK it you will see that 9999 has been updated to, say, AO29 for I = 10029. Clearly the ZX-81 does not decode line numbers greater than 9999 correctly but the result is comprehensible if you remember A follows 9 in the sequence of character codes.

If you leave the program running for long enough it will stop when I = 16384 and a LISTing will then omit the final line because the LIST command does not recognise it as a line. You can use this quirk to make programs "disappear" by POKE 16509, 64. Such "invisible" programs can be SAVEd and LOADed as usual and will RUN if 16509 is reset to its original value.

CUT-PRICE COMPANIONS

"Far and away the best" — Your Computer magazine

THE ZX81 COMPANION by Bob Maunder is now available at **ONLY £4.95** with a **FREE SUPPLEMENT** on the ZX Spectrum! This offer ends on 30 September, so hurry!

LINSAC is also producing a **SPECTRUM COMPANION** series, and the first title. 'The Spectrum Games companion' is available from October at £5.95.

The above prices include UK postage. Send cheques to:

LINSAC

LINSAC (SU),
68 Barker Road,
Middlesbrough TS5 5ES.

ZX81/SPECTRUM

A fantastic range of 16K games, each complete with fully comprehensive instructions from:

M.C. — LOTHLORIEN.

(incorporating M.C. Associates and Lothlorien Computer Group).

1. TYRANT OF ATHENS.
Can you survive long enough to turn Athens into the most feared state in the Mediterranean? Train troops, build airships, fight battles by land and sea against hostile Greek States and the vast Persian Empire. Many more features in this very addictive game.
Price: ZX81 £4.95. SPECTRUM £6.50

2. ROMAN EMPIRE.
Your aim is to conquer the hostile countries surrounding Rome. Build armies, appoint Generals and fight campaigns. This challenging game takes full account of morale, fighting efficiencies, leadership ability, etc. 3 levels of play.
Price: ZX81 £5.95. Spectrum available November.

3. PELOPONNESIAN WAR.
Set in Ancient Greece from 431-404 BC, covering the Great War between Athens and Sparta. Your goal is a final victory over the Spartans but you will need all your skill in a combination of diplomacy and military force before you even stand a chance.
3 levels of play.
Price ZX81 only £5.95

4. SAMURAI WARRIOR.
How could you have fared as a Samurai in 13th Century Japan? Face challenges and bandits. Are you a survivor? Or will you be forced to commit ritual suicide? 7 levels of play.
Price: ZX81 £5.95. Spectrum available November.

5. WARLORD.
A challenging game of analytical skill, similar to Tyrant of Athens. Set in 13th Century Japan as a companion to Samurai Warrior.
Price: ZX81 only. £4.95.

SPECIAL OFFER: Buy 3 or more games and deduct £2 from your total order.

Cheques and PO's please, made payable to: M.C. LOTHORIEN,
4 Granby Road, Cheadle Hulme, Cheadle, Cheshire SK8 6LS

The June competition for Spectrum and printer attracted a high standard of entries. The prize was awarded to a design which strikes good balance between hardware and software

MOS chip is used in winning EPROM blower contest

AT FIRST SIGHT, it would seem that the theme for this competition was a little out of context for a magazine such as *Sinclair User*. On closer inspection, however, it becomes clear that more and more programmers are introducing machine code into their programs whenever Basic becomes too slow in execution.

If we look at the next stage, a logical extension would be to keep a permanent copy of that useful re-number routine or perhaps that fast screen display which can be called-up in a Basic program and executed almost immediately.

Any program or routine written in main memory — or RAM — is lost whenever the computer is switched-off. To keep a permanent copy of a program we can either record it on cassette — or backing store — or we can copy it into a memory chip which keeps its contents intact even after power has been removed.

```
  100 PRINT "WHAT ADDRESS IN THE
EPROM"
  110 INPUT Y
  120 REM 3 NSB NEED TO BE A LOGI
C 1
  130 LET Y=Y+57344
  140 POKE 16514,Y-256*INT (Y/256

LOCATION IS ";PEEK 16517
1040 STOP
```

That type of memory chip is called a ROM, which stands for read-only memory. An 8K ROM is used in a ZX-81 to store the Basic interpreter and operating system.

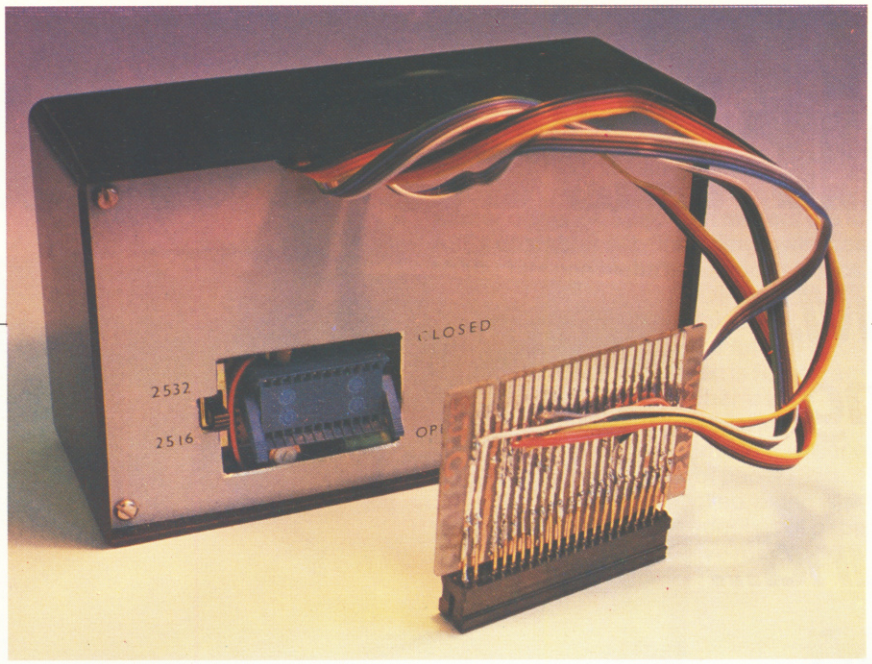
A disadvantage, so far as the experimenter is concerned, with a ROM is that once it has been programmed it is impossible to change. There is also available an erasable programmable read-only memory, or EPROM, which caters for such needs.

That was the idea of the competition, to design an EPROM blower which could be produced cheaply, work on a ZX-81 and allow the other Sinclair peripherals, such as the 16K memory and printer, to be used with it.

The response was very favourable and illustrated the wide variety of backgrounds of readers. It was most encouraging to see entries from school pupils with limited resources but nevertheless original ideas.

The winner of the competition was Stephen Churchman, of Blandford Camp, Dorset, who designed and built a prototype which performed very well. His design struck a good balance between the hardware used and the driving software. The documentation contained good, clear diagrams, the main one of which is shown and which should be possible to follow by an amateur.

The text accompanying the entry was well-written and included a Basic listing, shown, which not only programmed the EPROM but also checked the contents of each memory location after programming. If the memory contents of the



EPROM differ from those sent to it, an error message is issued giving the exact memory location of the error.

The design catered for the Texas Instruments 2516 EPROM as well as the 2532. A word of explanation is needed on EPROM specification. Like RAM chips, there are various types of EPROM chips available which differ in memory size and power requirements. There are two categories of power requirements, namely those requiring three voltage supplies — + 12V, -12V and + 5V — and those needing only a single power supply — + 5V.

The most popular type of EPROM used is a 2K × 8 using a single 5V power supply, and therefore the TI 2516 is a good choice of chip, since 2K of memory is adequate for the use of most experimenters and the power supply, which was part of the design specification, was kept as simple as possible. Also, it is possible to obtain a 2516 EPROM for about £3 from one of the many mail order companies.

The heart of the design was an 8255 programmable peripheral interface which has 24 lines of input or output which can be defined by software. It was regarded as an excellent choice, since it is a MOS chip and places almost no DC load on the data lines and only a slight AC load on the address lines. The chip is selected when the following conditions are met.

Address	A0	A1	A2	A3	A7	IOREQ
Logic Level	H	H	H	H	L	L

This means that machine code must be used to address the chip but that was not considered to be a disadvantage, since the programmer must be familiar with machine code to use the EPROM anyway. Apart from that, the normal ZX memory map is left free and, in fact, the area between where the Sinclair ROM finishes (8K) and where free RAM starts (16K) was chosen, which could well be used to hold routines to enhance Sinclair Basic.

The address was not fully decoded but some readers will notice that the chip select conditions mean that other ports used by ZX-81 are not affected — e.g., the printer.

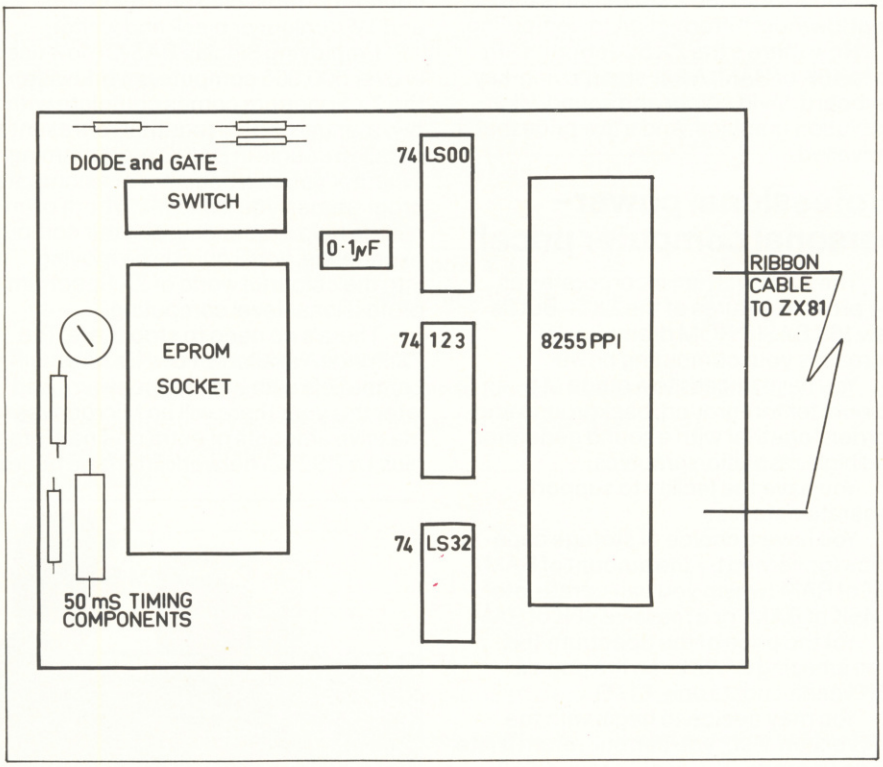
The designer used a two-tier approach to accommodate the two PCBs inside a plastic box. Considering the short time allowed to complete the design, the final hardware was considered to be well made, since the unit was completely self-contained, including the power supply.

There is no doubt that the biggest impact that computers will have in the future is in the area of process control. There is therefore a need to design small systems capable of executing a given sequence of instructions without further attention from human operators.

The set of instructions must, of course, be tested thoroughly to account for every likely event, but once that has been done, the program needs to be stored in some convenient package which is both reliable and cheap.

An EPROM fits those requirements and the fact that a hobbyist can experiment with work of this nature on an inexpensive ZX-81 is a very positive recommendation to the further development of this work.

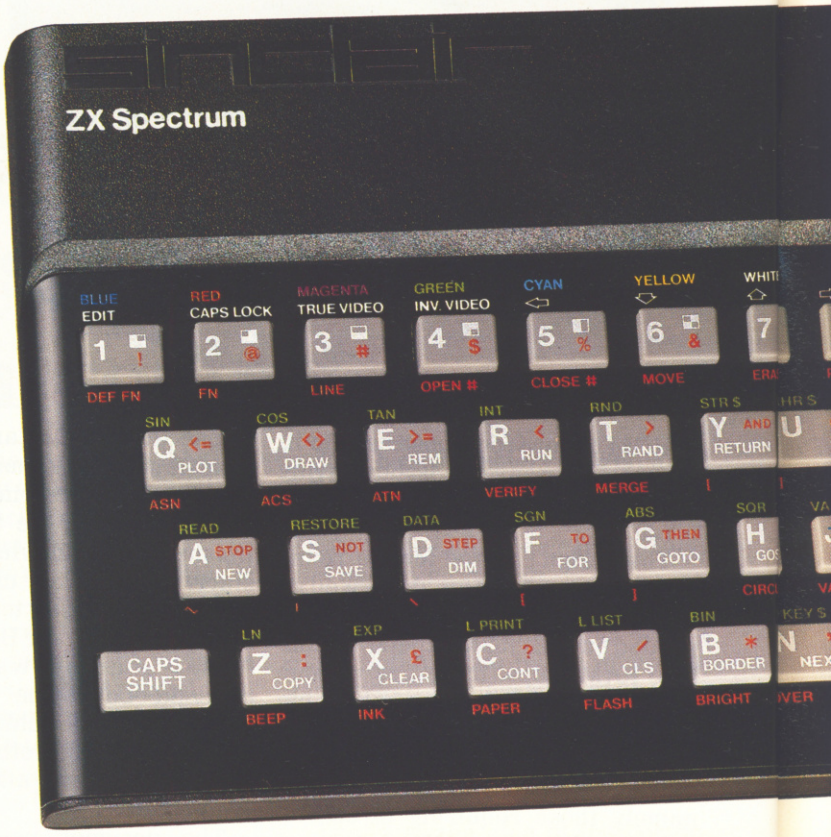
The range of entries received has proved that there is a great deal of enthusiasm and dedication among readers of *Sinclair User*. It was a tall order to produce a working prototype in the time allowed but it has been proved possible. Now, what can be done for the Spectrum?



Sinclair ZX Spectru

16K or 48K RAM... full-size moving-key keyboard... colour and sound... high-resolution graphics...

From only £125!



First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power– personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can uprate later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer – available now – is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour – 8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound – BEEP command with variable pitch and duration.
- Massive RAM – 16K or 48K.
- Full-size moving-key keyboard – all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution – 256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set – with upper- and lower-case characters.
- Teletext-compatible – user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE – 16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC – incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

rum

The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

The ZX Microdrive – coming soon

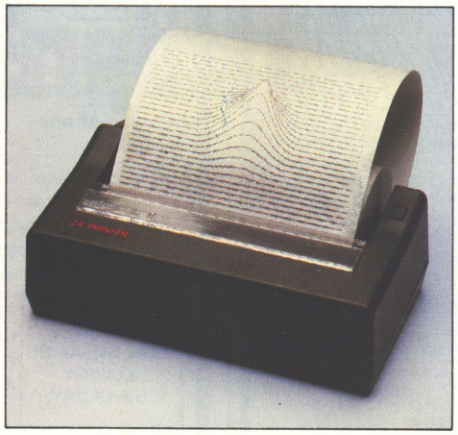
The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing.

Each Microdrive is capable of holding up to 100K bytes using a single interchangeable microfloppy.

The transfer rate is 16K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around £50.



How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard, Access or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR. **Order**

An incredible game in 1K for only **£2.95**

* **SPECTRUM CHESS 48K**

ZX81 ARCADE GAMES

NEW

GOBBLEMAN — Escape from munching ghosts to eat power dots and then gobble up the ghosts. Similar to classic arcade game. **£3.95**

NAMTIR RAIDERS — High-speed, quick action arcade game with four separate groups of attackers. **£3.95**

GALAXIANS — Swooping attackers, explosions and personalised scoring. **£3.95**

NEW

UTILITIES:

TOOLKIT — Nine powerful new functions for your ZX81 (including: re-number lines (goto, gosub), program merge, string finding and replacement. **£5.95**

SPEC BUG — A 30 in 1 machine code tool and disassembler for your ZX Spectrum. **£6.95**

ASSEMBLER — Full editor assembler and monitor giving an extremely powerful tool for writing and running machine code programs on your ZX81 and Spectrum. Includes user manual. **£9.95**

ZX BUG — A 30 in 1 machine code tool and disassembler for your ZX81. **£6.95**

LOW COST ADDITIONAL RAM PACKS

16K Ram Packs	£29.50
32K Ram Packs	£38.95
64K Ram Packs	£64.95

ADVENTURE GAMES

JUST RELEASED **ESPIONAGE ISLAND** (Adventure D)
While on a reconnaisance mission your plane loses control and you are forced to land. Can you survive and escape with the island's hidden secret? **£8.00**

PLANET OF DEATH (Adventure A)
You find yourself stranded on an inhabited alien planet. Can you reach your ship and escape? **£5.00**

INCA CURSE (Adventure B)
In a jungle clearing you come across an ancient Inca temple. Your mission to enter, collect the treasure and escape alive. But beware! Includes a cassette save routine. **£6.00**

SHIP OF DOOM (Adventure C)
You are unavoidably drawn to an alien cruiser. Can you reach the control room and free yourself? Or will they get you first? Includes a cassette save routine. **£7.00**

ZX FORTH
Supplied on cassette with editor cassette, user manuals and keyboard overlay. ZX Forth combines the simplicity of basic with the speed of machine code all for only **£35.00.**

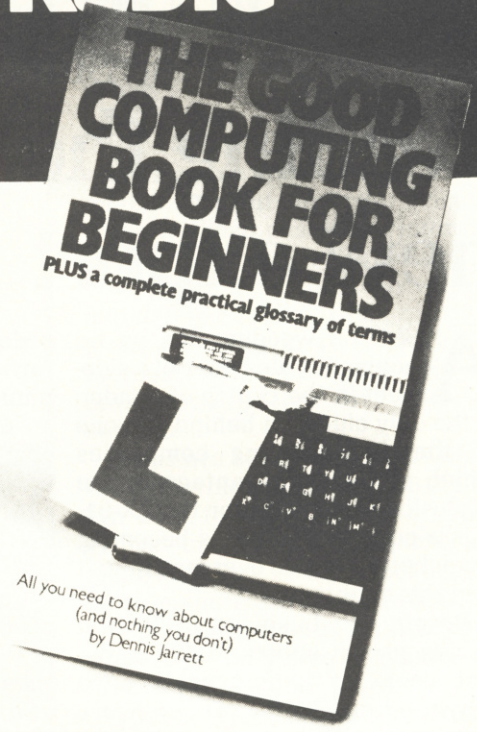
Learn all about computers through a remarkable new language.



THE GOOD COMPUTING BOOK FOR BEGINNERS
PLUS a complete practical glossary of terms
All you need to know about computers (and nothing you don't) by Dennis Jarrett

Simple English.

At long last, someone has written a book on computers that even Aunt Emily can understand.

That someone is none other than Dennis Jarrett: doyen of simple English and former Managing Editor of WHICH COMPUTER? and *Practical Computing*. And his book is called The Good Computing Book for Beginners.

If you're not a beginner, don't let the title put you off. Because this book provides a wonderful opportunity of clearing up any grey areas of your knowledge.

And a glance at the chapter headings down below may well give the impression that this book is fun to read. You would be right. It's the brightest way imaginable of learning all about computers.

There's also a complete language guide to computer-jargon mumbo-jumbo in a glossary of terms that's as comprehensive as you'll find anywhere.

All in all, you'll find this book does for computers what Berlitz did for languages. In 304 pages. And at a modest £1.95.

Your course in computers.

1 *Introduction to the introduction – computer myths, why they are being dispelled, and the truth about computers.*

2 *What goes on inside – a swift canter through the heavy technology, avoiding irrelevant and/or difficult ideas: processors, chips, memory, I/O.*

3 *Programmes – what makes the computer tick, or at least where the noise comes from: system software, applications, the pleasant and unpleasant faces of programming.*

4 *What's a personal computer? – new readers start here, because this is all you need to know: what can it do? What's available? And where do you buy a computer?*

5 *What to look for – how to buy a small computer, or at least how to avoid complete disappointment.*

6 *A practical glossary – facts, opinions, references and a few personalities.*

7 *Now read on – recommended reading, with notes.*

Enrol here!

Data-Assette entered the ZX-81 market via its tape business. It now sees its future tied closely to the Sinclair machine

Leading the way into new export markets

A SMALL wooden sign on an anonymous blue door in a side-street in the centre of London is the only clue that behind it is one of the fast-growing companies which is taking advantage of the explosion in demand for the ZX-81. It is a company which is becoming much better-known overseas than it is in this country.

Despite its business in Britain having grown substantially in the last year, its export sales have grown even faster. It answers queries regularly from and plays host to ZX-81 enthusiasts from all over the world.

Data-Assette attracted the attention of ZX-81 users when it introduced the ZX-99 tape control system in April. It entered an add-on market which was depressed in Britain because of the launch of the Spectrum. The market for exports, however, was just beginning to expand.

"We launched the ZX-99 when the market was reasonably mature in Britain but it was only just starting in the rest of the world and I think that helped us a great deal," says sales manager Nigel Boyle.

"Whereas users in this country already had many of the add-ons available in the market and were buying the ZX-99 to supplement them, people overseas were only just beginning to look at the add-on market and when they placed an order with us they were also asking for other items from other companies.

"We are finding that people from overseas prefer to go to a single supplier in the centre of London rather than having to visit all the add-on suppliers throughout the country."

The result is that the company now acts as an export agent in most of Western Europe and the English-speaking world for a number of companies, including Kayde and Phoenix Marketing for hardware, and software houses such as JRS, Artic and Carnell.

Data-Assette is the latest venture by an American, Pete Wills, who bought a small British mail order company which was in difficulties two-and-a-half years ago. He managed to turn round the company initially by selling clock radio recorders aimed at Open University students who could use them to record their lectures, broadcast usually at awkward hours.

The company then expanded into the market for hi-fi accessories. One of the major markets was selling cassette tapes wholesale. It became aware of the home computer market when it began to have a demand for short tapes on which to record programs. Data-Assette was set up to take advantage of that.

"We now supply tapes for the full range of personal computers but the biggest proportion of them are for the Sinclair market," Boyle says.

The company expanded later into the mass production of tapes for software houses and then development of the ZX-99.

"Both the owner and I have Sinclairs and we soon realised that it did not do all we wanted it to do, so we found someone to build what we wanted," Boyle says. "We were talking initially about a switching unit and we went from there to something which would work under program control."

He adds that after developing the tape control system, the company found it had some spare space in the read-only memory. It was decided to use it by adding an RS232C printer interface.

"We now have a product which allows people to have all the facilities of the Spectrum, apart from sound and colour graphics, just by buying a ZX-81 add-on," Boyle says.

"The response has been phenomenal. We are receiving about 20 enquiries a day about it. We realised the market was big but we did not

'The ZX-99 entered a depressed British add-on market but the market for exports was just beginning to expand'

Gwen Shafieian and Nigel Boyle study their new copying machine.

realise how big." Company growth can be seen from the turnover figures. In April, 1981 sales were slightly more than £1,200. In April, 1982 they were £16,000 in Britain, with another £3,000 in exports. By June, export sales had risen to £9,000 but sales in Britain had fallen to £6,000.

"Sales are varying between £15,000 and £20,000 a month and we are aiming for profit on that of about 30 percent," says Mrs Gwen Shafieian. She adds that although the company still sells goods in the old markets, by far the largest part of its turnover is in the Sinclair market.

As the company is growing so quickly, all the profit is ploughed back for further development and keeping Data-Assette working from day to day.

In common with all small, rapidly-expanding businesses, Data-Assette has to be careful that it keeps tight control on its financial position. Cash-flow always has to be watched carefully to make sure there is sufficient to pay bills when they arrive. Suppliers usually are wary of new, small companies in the volatile mail-order, home-computer market and can be unwilling to give extended credit facilities.

"Luckily the owner has a good deal of business experience and makes sure we can walk before we try to run. Often he is able to spot the problems before they arise and so we can take steps to reduce them," Mrs Shafieian says.

She adds that the move into the export market was an example of the difficulties which could arise.

'In April, 1981 sales were slightly more than £1,200. In April, 1982 they were £16,000 in Britain with £3,000 in exports'

Although the company would like the market to grow, it has to be sure that it has sufficient capital to cover the increase in the payment period.

"We sent 30 99s to France in April and the payment has only just been cleared. We had to have sufficient to pay the bills while that money was tied-up."

She says that Data-Assette also needs to take extra care of its customers, as mail-order companies generally have a poor reputation for delivery.

"We keep plenty of stock to ensure that we can satisfy orders in a reasonable time and if we are unable to meet an order immediately, we keep customers informed of what is happening," she says.

Although the company is wary of expanding rapidly, it has plenty of plans for growth. It is looking to increase the export side and the mass production of program cassettes.

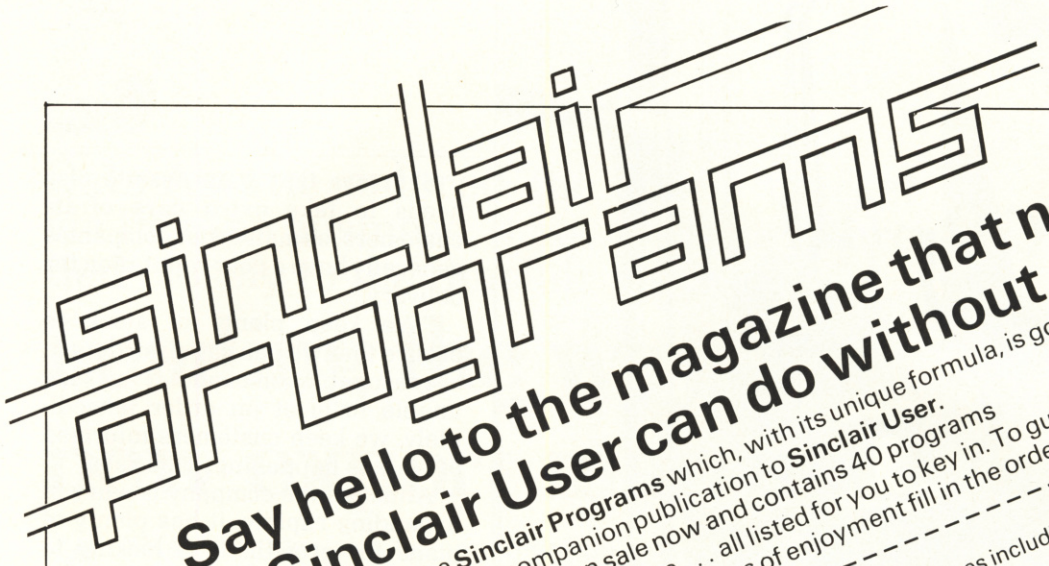
Talks are being held with Mitsui, the firm which sells the ZX-81 in the Far East, to sell hardware and programs in Japan, Singapore and Hong-kong. It is also looking for more manufacturers in Britain for which it can act as agent. Mills is at present in the States to oversee the increasing business there.

To cope with growth in tape duplication it has had a special copying machine built which allows 50 copies to be made at a time. It has opted for the slower copying system to achieve higher quality and fewer bad tapes.

At present the company buys high-quality Agfa PE68 tape for the blank tapes it sells wholesale and has them wound by a sub-contractor but is thinking of doing it itself.

Another possibility is to set up a retail outlet in the centre of London to serve the many overseas visitors. At present, the offices in Shroton Street, near Marylebone Station, serve as showroom; the company would like premises where it could sell a full range of hardware and software.

Other schemes included are an adaptation of the ZX-99 to fit the Spectrum and the development of software for the business market.



Say hello to the magazine that no Sinclair User can do without

We are proud to announce **Sinclair Programs** which, with its unique formula, is going to prove a great companion publication to **Sinclair User**.

Sinclair Programs is on sale now and contains 40 programs covering the whole spectrum of ZX usage . . . all listed for you to key in. To guarantee you receive the magazine that guarantees you hours of enjoyment fill in the order form below.

ORDER FORM

☐ Please start me a subscription to Sinclair Programs at £6.60 for six issues including postage. Applies U.K. only.

☐ Please send me a single copy of Sinclair Programs at £1.10 to include postage. Applies U.K. only.

I enclose a cheque for £..... made payable to ECC Publications Ltd.

Name.....

Address.....

Also available at all leading newsagents.

What is the best way to guarantee that you never become bored with your Sinclair computer?

The answer is to subscribe to *Sinclair User*, written specifically for owners of ZX-80s, ZX-81s and Spectrums. *Sinclair User* is the latest montly from ECC Publications — pioneers of Practical Computing, WHICH COMPUTER?, and Computer & Video Games. Whether you bought your system yesterday or are an old hand, you are probably an enthusiast for your machine ad your biggest problem is likely to be obtaining all the information to satisfy your interest. *Sinclair User* is devoted to quenching your thirst for information.

As the name suggests, the content is geared specifically to helping you, the user. There are pages of information on available hardware and software. Our aim is to make *Sinclair User* invaluable and we chronicle applications which are of special interest.

Make sure you get it each month

Can you continue to obtain the most from your Sinclair without reading *Sinclair User* every month? So why not fill the subscription order form **today?** Send it to *Sinclair User*, ECC Publications, 30-31 Islington Green, London N1 8BJ.

Overseas rates: Europe £18, Outside Europe £24 (Including air-mail postage) Cheques should be made payable to ECC Publications.

Subscription Order Form

I wish to start a subscription to *Sinclair User*. I understand that I may cancel my subscription at any time and you will refund the balance.

☐ I enclose a cheque for £9 for 12 issues (U.K. only — including postage).

☐ Please charge my credit card.

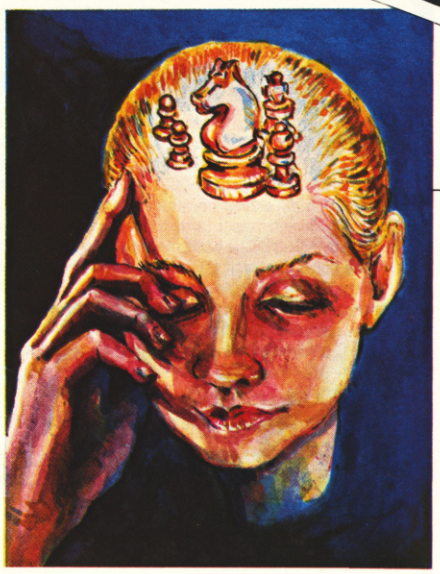
Taking the short route to success

Philip Joy looks at readers' chess games



SIMON Gross of Ipswich, has written saying that this page does not include sufficient details about the famous mind game, chess. With details from his letter and two chess games I hope to rectify this. First, a game sent by D Egdoll, of Glasgow with details of a game in which he played against Artic Computing ZXchessII.

	D E White	ZXchessII Black
1	e2-e4	e7-e5
2	g1-f3	b8-c6
3	f1-c4	g8-f6
4	c4 × f7 ch	f7-g6
5	f3-g5 ch	f7-g6
6	h2-h4	h7-h6
7	h4-h5 ch	f6 × h5
8	d1 × h5 ch	g6-f6
9	h5-f7	f6 × g5
10	h1-h5	g5-g4
11	f7-f5 checkmate	

Another game is from P Robertson of Birmingham, who played the Micro-Gen version of chess at level 2.

white	P C black	Micro-gen
1	e4	e5
2	Nf3	Nc6
3	Bc4	Nf6
4	Ng5	d5
5	ed	Nd5
6	Nf7	Kf7
7	Qf3 +	Ke6
8	Nc3	Nb4
9	a3	Nc2 +
10	Kd1	Na1
11	Nd5	Kd6
12	d4	c6
13	Bf4	ef
14	Qf4 +	Kd7
15	Re1	b5
16	Qf5 +	Kd6
17	Qe5 +	Kd7
18	Qe6 checkmate	

Both games were won by the person who sent them. Why do you not send a game in which the computer won?

Both show that you can win in a few moves, which should prove to people who find a ZX-81 program difficult to beat that it can be done.

From the letters I receive it seems that for the player to win, it is a short game; if the computer wins or it is a draw it is much longer. If you send the games I would prefer you to use the first method of notation; it is the more standard one and is easier to read. If you have another method which you feel is just as good, please send it.

Gross, who has looked closely at Artic ZXchessII, spent many hours playing it and found some very interesting results but they did not prove how the game played.

He has sent a table showing what he thinks is the number of moves that chessII looks ahead on each level:

Level	no. of moves looked ahead
0	2
1	4
2	4
3	4
4	5
5	6
6	7 or more.

Where the moves are the same, in j1, 2 and 3, the time taken for a move

> 'For the player to win, it is a short game; if the computer wins it is much longer'

was nine, 12 and 80 seconds. This might show that the game uses a different method to work out the moves on those levels. He adds that to look five moves ahead at the start of the game may show many thousands of possibilities but in the end game, five moves ahead might not be possible, as checkmate is in two.

I think the computer should look ahead as much as possible until its memory can hold no more. The levels should decide how long it spends doing this.

If you have done similar work on the version of chess you have, send the results.

I shall leave you with a problem sent by Gross which you to can try on your version of chess for ZX-81. If your version lets the computer play itself, do that, otherwise let the computer play black. It is black's move and it has to avoid being mated in three.

The position, in standard chess notation, is: White: king on h1, queen e1, rooks e2 and e3, pawns h2, g2, f2 and a5;
Black: king h8, queen a6, rooks b8 and a8, pawns c4, f7, g7 and h7.

ZXchessII was mated in three moves at levels 0 to 5. It escaped in level 6 but took 7,200 seconds. Send your results and make them as detailed as possible. One good first move for black is a6-c6.

The winner of the competition, in which I asked for the address to which a program should jump to give the amount of free memory was Colin Norris of Stanford-le-Hope, Essex.

Congratulations and if he sends a blank tape, with at least 20 minutes each side, I will record a copy of my Adventure.

The answer was 61. So to find the amount of spare memory print the line PRINT USR 61.

Anyone wishing to write to me about items in this column, or other Mind Games, can contact me at 130 Rush Green Road, Romford, Essex. If you send tapes or other information which you would like returned, please enclose a stamped-addressed envelope.

ZX SPECTRUM CITY

Within a few weeks of getting our first ZX-81 we had a good working version of "MONOPOLY". We did not think it would sell so we scrapped it. We have been kicking one another ever since! However, it was developed in parallel to a mainframe game called "CITY" which was an enhanced version of "MONOPOLY" played on a street map of London rather than the standard board. The street map took up a few hundred kilobytes and thus was not easily put into the ZX-81. The basic mechanics of the game are available for the ZX-81 but the game is played on a blank map. The streets are constructed with the buildings. Now, along came the SPECTRUM with 48K of RAM and in went the street map, not London but an imaginary town. The colour facilities made the program simpler than the mainframe version because much more information can be displayed to the player on one screen. In the end 'CITY" is not at all like the game that inspired it. Everyone that we have invited to test it says that it is much better!

16K ZX-81 CITY £6. 48K ZX SPECTRUM CITY £8.

ZX ASSOCIATIVE DATABASE SYSTEM

A variable format database in which nothing need to pre-defined. It adapts to your needs as you use it. Conventional searches, sorts, updates, merges, etc, become a thing of the past. Our local "EXPERTS SYSTEMS" expert is quite worried about it.

16K ZX-81 ADBS £9; 16 or 48K ZX SPECTRUM ADBS £14

SPECIAL OFFER

You can now buy our top three ZX-81 games together for the special price of **£9.95.** The Planet Game, Elephant and Castle plus Dominoes would normally cost £14. This offer is until December only.

DOCIMODUS

161 Walmersley Road, Bury, Lancashire BL9 5DE.

ZX SAS

Serious Application Software for your 16K ZX-81/SPECTRUM

(Please specify)

INCOME TAX

Checks PAYE coding by offering you all likely allowances — displays and prints your coding and its make-up, then powerful facilities automatically calculate NI and PAYE deductions to five years net pay for next week or month. Options for overtime, salary increases, etc. Plan your income for £6.50.

BRIDGE

Ideal for all bridge players. Enter contract bid and made, BRIDGE does the rest for you. All over — trick, slam, doubled points etc. Displays and prints scorecard, totals for 5 rubbers and all hands played. A high-class program excellent value at £6.50.

SALES LEDGER

Excellent small business system, prints cash received/sales day books on monthly basis, maintains ledger for 50+ accounts, prints statements, names and addresses, etc. Only £10.

Also RETAIL ACCOUNTING (£8). INDEX/RETRIEVAL SYSTEM (£6.50)

** £2 off any 2 ** £5 off any 4 **

***Tailor-made software developed — please contact us for a prompt quotation**

ZX81/Spectrum Computer Software

'ORBITER' & 'GROUND ATTACK! Simply the most amazing ZX-Spectrum arcade games available.

ORBITER Fast and furious action is what you get in this amazing Defender-style program for the ZX-Spectrum.

All the excitement of the arcade inhabits your micro. Aggressive aliens flash across the screen as you try to destroy them with your laser-bolts and smart bombs, while rescuing the humanoids.

Orbiter is written entirely in m/c code and has full arcade features, including scanners, reverse, hyper-space, continuous scoring and sound effects, plus humanoids, landers, mutants and all the other alien nasties which make it one of the best games around.

GROUND ATTACK Survival is the name of the game in this exciting Scramble-type arcade game for the ZX-Spectrum.

Your mission is to pilot your spaceship through tortureous caverns while destroying the enemy missile launchers and fuel dumps. Endurance as well as quick thinking are needed to survive as the caves become progressively smaller and airborne aliens start to appear. No-one has yet survived!!

GROUND ATTACK is written completely in machine code. It has 26 zones, full: up, down, forward and reverse, controls. Lasers, bombs, explosions, continuous scoring and sound effects, plus rockets, fuel dumps and airborne aliens.

Both games will run in either 16K or 48K Spectrum and cost £5.95 each.

Programmers NOW you can make money from your micro. Send your programs to us today. We pay probably the best royalties around.

GENEROUS DEALER DISCOUNTS AVAILABLE
Silversoft Ltd, 20 Orange Street, LONDON WC2H 7ED.

NEW! ZX81-COMPILER Yes! Now you can write machine code on your ZX81. No more messing about with assemblers and disassemblers simply type in the BASIC program and the machine does the rest. You'll never need to buy another machine code program again!! ONLY £5.95.

MAIL ORDER ADVERTISING

British Code of Advertising Practice

Advertisements in this publication are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is paid in advance, the code requires advertisers to fulfil orders within 28 days, unless a longer delivery period is stated. Where goods are returned undamaged within seven days, the purchaser's money must be refunded. Please retain proof of postage/despatch, as this may be needed.

Mail Order Protection Scheme

If you order goods from Mail Order advertisements in this magazine and pay by post in advance of delivery, *Sinclair User* will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:

(1) You have not received the goods or had your money returned; and

(2) You write to the Publisher of *Sinclair User* summarizing the situation not earlier than 28 days from the day you sent your order and not later than two months from that day.

Please do not wait until the last moment to inform us. When you do write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent (up to a limit of £4,250 per annum for any one Advertiser so affected and up to £10,000 per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with at the discretion of *Sinclair User*, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties).

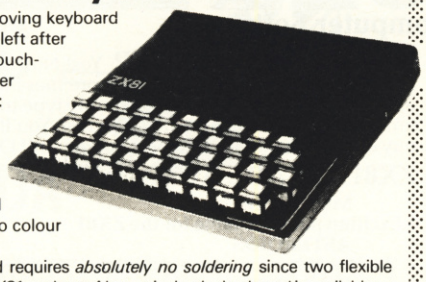
This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc, received as a result of answering such advertisements). Classified advertisements are excluded.

KEMPSTON (Micro) ELECTRONICS

ZX81 Klik-Keyboard

This is a full, forty key, moving keyboard which fits into the recess left after peeling off the existing 'touch-sensitive' keypad. Consider the following advantages:

- Positive feedback from keys
- Fits onto the ZX81
- No trailing wires
- No special case needed
- Elegant design with two colour legends.



The fully built keyboard requires *absolutely no soldering* since two flexible connectors plug into the ZX81 sockets. Alternatively, the keyboard is available as an easy build kit at a considerable saving.

Now available with 41 keys, the extra key can be used to give a repeat facility.

	£22.50 (kit)	**£26.00** (built)
41 key version:	**£26.50** (built)	**£23.00** (kit)

All prices inclusive of VAT, but postage must be added at 70 pence for a single item, 100 pence for 2 or more items. Payment by cheque or P.O.

Available by mail order from:

KEMPSTON (Micro) ELECTRONICS
60 Adamson Court, Hillgrounds Road, Kempston, Bedford MK42 8QZ

Please allow 21 days for delivery. S.A.E. in all correspondence.

READ-OUT

READ-OUT FOR SOFTWARE & BOOKS

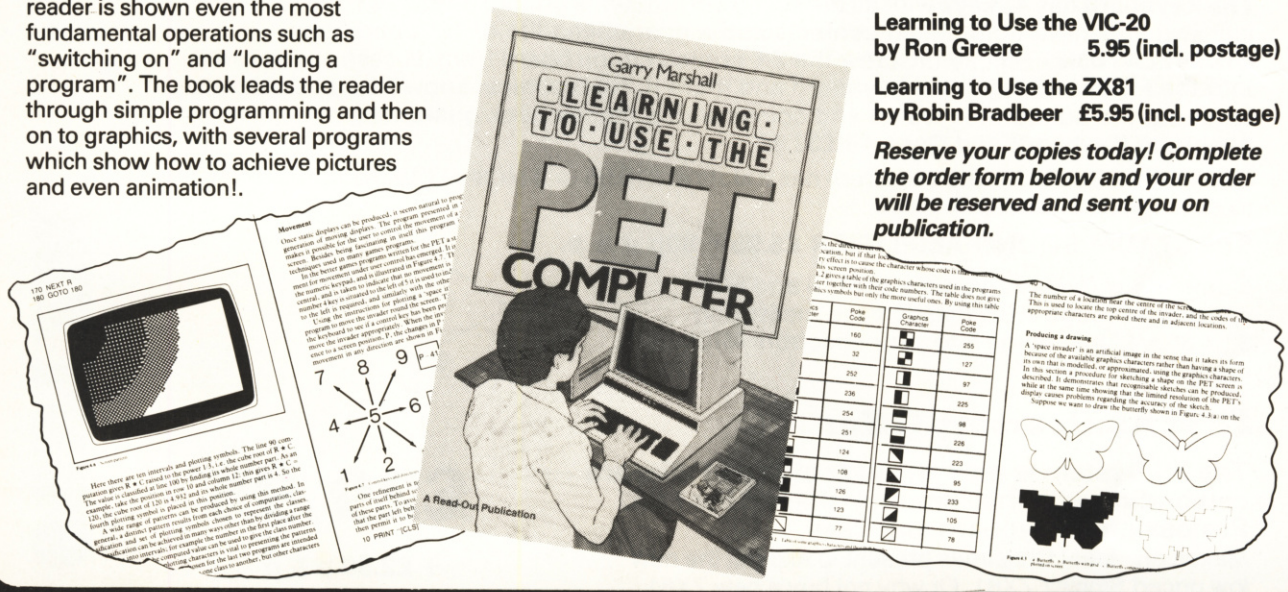
JUST AVAILABLE

THE FIRST IN A NEW SERIES FOR FIRST TIME USERS

Learning to Use the PET Computer by Garry Marshall is the first title in a new series of books which introduces newcomers to the most widely used micros in the marketplace.

The book assumes absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The book leads the reader through simple programming and then on to graphics, with several programs which show how to achieve pictures and even animation!.

The user friendly approach is consistent throughout the text – not only are program listings clearly shown, but, in many cases, a photograph is included to show what the program looks like when actually loaded and run! £5.95 (incl. postage) **Gower – A Read-Out Publication**



Other titles in the series due August/September 1982

Learning to Use the ZX Spectrum
by Robin Bradbeer £5.95 (incl. postage)

Learning to Use the BBC Microcomputer
by P. M. Dane £5.95 (incl. postage)

Learning to Use the VIC-20
by Ron Greere 5.95 (incl. postage)

Learning to Use the ZX81
by Robin Bradbeer £5.95 (incl. postage)

Reserve your copies today! Complete the order form below and your order will be reserved and sent you on publication.

New From Fuller
FD System for the
ZX SPECTRUM

£39.95
+ £2.50 p & p.

Professional Keyboard & Case —

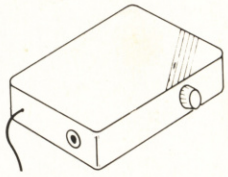
This unit has the same high standard as our ZX81 unit.
Tough A.B.S. Plastic case encloses our Keyboard, the Spectrum Printed Circuit Board and the Power Supply.
Our own Power supply is available:- 9 volts DC at 2 amps.
Mains either 110v or 240v AC at £5.95 + 80p. p & p.

The Keyboard has 42 keys with all the spectrum functions printed onto them, the full travel key switches have gold plated contacts and a guaranteed life of 10^6 operations.
INSTALLATION - Simply unscrew the ZX printed circuit board from its case and screw it into the FD case, plug in the keyboard and that's it. No technical know how or soldering required, the built unit is tested and comes with a money back guarantee.
Spectrum Keyboard and Case Kit £33.95

Our Mother Board for the spectrum has 2 slots at £15.95 or 3 slots at £19.95, this unit also fixes inside the case. p & p 80p.

SPECTRUM SOUND AMPLIFIER £5.95 + 80p p & p.

Complete with leads, volume control and loud speaker in tough ABS Plastic case measuring 5" x 3" x 1" just plugs into your spectrum MIC input.



First Anniversary Offer

The FD System is now one year old and Fuller are celebrating with this amazing offer on the FD42 Professional Keyboard and Case.
Makes an ideal Christmas present to expand the new low priced Sinclair ZX81. Or why not buy a new ZX81 based system directly from us, consisting of ZX81, FD42 keyboard and case with power supply and reset switch, leads and manual **£69.95 + £2.50 p & p**
FD42 Keyboard and Case Kit £24.95 + £2.50 p & p
FD42 Keyboard kit £14.95.80p p & p

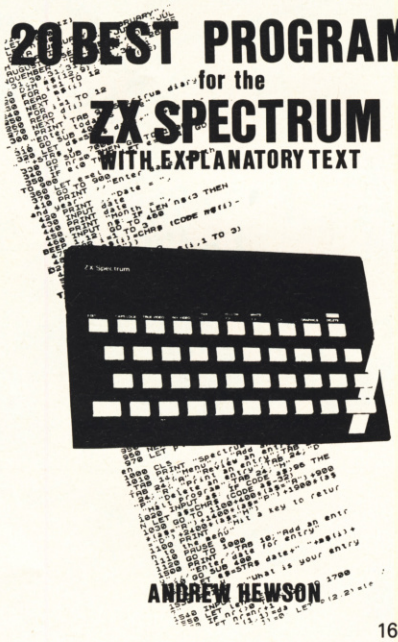
20 BEST PROGRAMS for the ZX SPECTRUM £7.95



Mr HELPLINE — the man who answers your ZX queries in his column in *Sinclair User*, the author of HINTS & TIPS FOR THE ZX80 and HINTS & TIPS FOR THE ZX81 now presents his 20 BEST PROGRAMS FOR THE ZX SPECTRUM.

* 20 original programs for you to load into your Spectrum.
* 20 interesting programs for you to enjoy and learn from.
* 20 great programs to teach you about fixed and variable length records, binary searches, bubble sorts, floating point arithmetic, graphic displays and much, much more . . .
* **20 BEST PROGRAMS FOR THE ZX SPECTRUM.**

Program Titles Include:

Machien code editor — Write, modify, exend and load machine code using this all-Basic machine code editor. No need to use an Assembler when you have this program.

Index file — Learn about fixed length records, save numeric and string fields, add to, sort, modify, delete and print your records. Ideal as a computer based card index.

Duckshoot — Learn how to manipulate the attribute file *and* have fun at the same time.

Diary — Binary searches and variable record lengths are explained with this useful and interesting program.

PLUS: FOOTBALL, DIGITISER, DATA PLOT, FUNCTION PLOT, REGRESSION, HISTOGRAM and many more . . .

Z80 OP CODES £1.45

A must for the beginner and the experienced programmer alike. This hand ready reckoner lists all 600 plus Z80 machine code instructions in decimal and hexadecimal with their mneumonics. Each Op Code is succinctly explained and cross-referenced. Supplied in a protective transparent wallet for easy reference and durability.

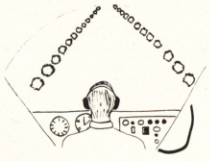
PROGRAMMERS TOOLKIT ZX81 £6.50

Toolkit functions include:

* RENUMBER including the destination lines of GOTO's and GOSUB's, START and Finish lines and Step size specified by you.
* DELETE part or all of a program at your command.
* REPLACE character(s) or token(s) with an equal number of others specified by you.
* EDIT to creat sub routines at a stroke by moving blocks of basic program lines.
* FIND a basic program string specified by you.
* INPUT prompts for a two digit hexadecimal code and pokes it in at a specified address.
* Separate version available for 48 + 8 and 64K memories (resides at 8192).

PILOT ★ ZX81 £5.95

New and exciting. Pilot challenges you to take off, fly between beacons, then land whilst watching wind speed and dodging craggy mountains – either could lead to disaster! If you take the challenge, you may soon learn to fly solo – so detailed are the flying instructions. Coast along in Autopilot – jut to gain confidence, then battle your way through 6 further modes. 6 different ways of trying to steer your plane safely back to base, increasing in difficulty, testing your skills. Good luck with your fight against the unpredictable elements!



PUCKMAN *NEW!* ZX81 £5.95

* All action display
* Scour the maze for food
* Dodge the ghosts who come to devour you
* Automatic option – the machine plays itself
* Full keyboard display
* Full instruction display
* Continuous scoring
* Beat the best score to date
* Super graphics when used with Quick Silva graphics board

Major link with Prestel promised early next year

A HUGE increase in the facilities available to owners of the Spectrum is promised early next year. A database of between 25,000 and 30,000 pages is being set on Prestel which can be used by Spectrum owners for the cost of an adaptor, which is expected to be produced for less than £50; an annual subscription to the database, possibly about £1 a week; and the price of a normal telephone call.

Called Micronet 800, eventually it will be available to owners of a wide range of micros, once adaptors have been produced for them. The Spectrum is one of the first machines for which an adaptor is being built.

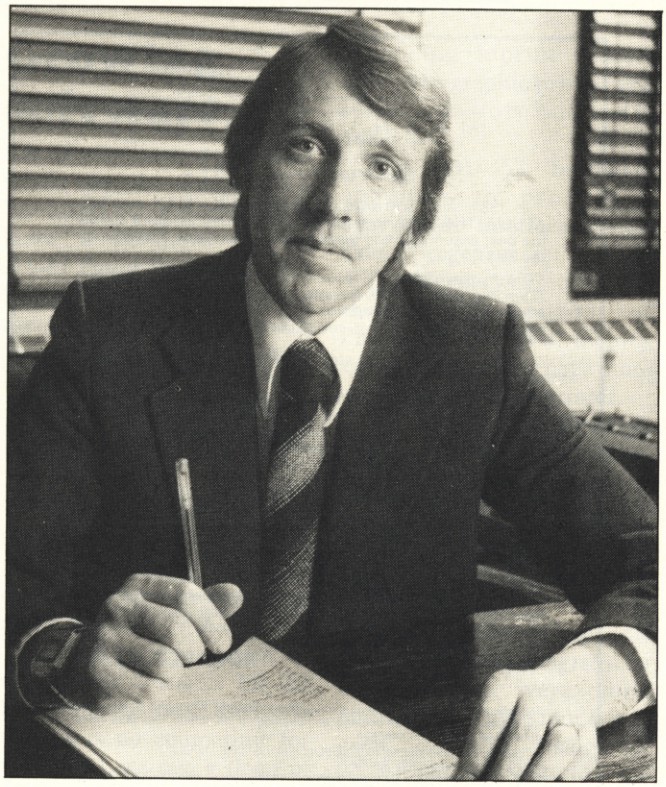
Richard Hease, the man behind the scheme, says that the database will be set up by Christmas and he hopes the Spectrum adaptor will be ready early in January. One for the ZX-81 should follow shortly afterwards.

"I see these adaptors being needed only in the short term. Eventually I expect computer manufacturers to see the benefits of using this database and to include hardware needed within the machine," he says.

Subscribers to Micronet 800 will be able to get programs for the home, business and education, have the latest news and reviews on what is happening in the world of micros, and have the use of Telex and the handling of messages.

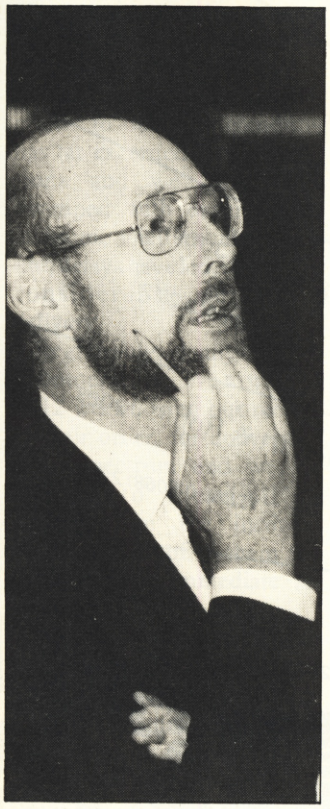
In the longer term it is intended to develop systems for specialised business areas.

The Micronet adaptor also allows users access to the existing database which is available on Prestel.



RICHARD HEASE
'I expect manufacturers to see the benefits'

Micronet 800 is a consortium of Prestel, ECC Publications which publishes *Sinclair User*, EMAP Computer and Business Publications/Telemap and Prism Microproducts.



CLIVE SINCLAIR
Apologised for delay

High hopes of end to delays

HOPES were high at the time of going to press that the backlog of deliveries for the Spectrum would have been removed by the end of September.

In a letter to *Spectrum User*, Clive Sinclair has apologised for the delay and offered a £10 voucher to those who have continued to wait. The voucher can be used against the cost of a ZX printer or rolls of printer paper.

He says production is running at 5,000 a week and should be increasing quickly.

It is expected that once the backlog has been cleared and production is keeping pace with demand from mail order, Sinclair Research will let the situation continue before making any decision about making the machine available in retail outlets.

A spokesman for the company said that although it was likely the Spectrum would follow the ZX-81 into the shops, there were too many imponderables at the moment for a decision to be taken soon.

It is unlikely that it will be available in the shops before Christmas. Last year the ZX-81 went on sale in W H Smith and was launched in the U.S. before Christmas and the resulting surge in demand caused delivery delays.

Nigel Searle, head of the computer division, has already said the mistake will not be repeated in connection with moving into the U.S. with the Spectrum.

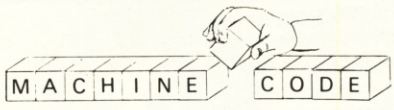
Converter for 16K RAM is launched

MEMORY troubles are over on the Spectrum because of a new device from Steven Adams, called a RAM Converter. It is an adaptor which can be fitted on to the back of the Spectrum via the expansion bus allowing a 16K RAM pack, usable on the ZX-81, to be connected.

The converter will also allow the use of other add-ons while it is working. The add-ons must be memory-mapped from 16K to 32K of the machine memory.

Adams decided to make the converter because his work required more memory than the Spectrum 16K allowed. "I thought that it was such a waste to have all that ZX-81 gear hanging around."

The Converter is available for £7.



ZX Spectrum — ZX81

In 1981, ACS Software published ACSEMBLER and DIS-ACSEM. These are now generally regarded as quite simply the best assembler and disassembler programs available for the ZX81.

"The disassembler . . . is really fantastic." A.M., London
"I am very pleased with the assembler and I feel that you have a real winner in this program." R.B., Gloucester
Your programs are first class. Looking forward to more." A.J., Norway.
". . . the single biggest step to proficiency in machine code programming." SINCLAIR USER

Now, with the superior facilities of the ZX Spectrum, ACS Software have done it again. **Ultraviolet** and **Infrared** are assembler and disassembler programs that will extend your Spectrum. Look at the facilities that Ultraviolet offers:

Works entirely in decimal (no hex problems); all Z80 instructions correctly assembled; supports the pseudo-instructions EQU, ORG (multiple ORGs allowed), DEFB, DEFW and DEFS; code can be assembled at one location and then relocated; allows alphanumeric labels of any length; full listings of assembled code and mnemonics can be output to the printer; full error trapping with faulty instruction clearly indicated; comments can be included in the source file.

So now there is no need to be intimidated by machine code - with Ultraviolet and Infrared it's child's play! Buy them from the machine code specialists - ACS Software.

ULTRAVIOLET - £7.50 **INFRARED - £6.75**

The following programming aids are available for the 16K ZX81 at £5.50 each. SAE for details. Prices include postage and packing for UK orders, overseas clients please add appropriate postage.

ACSEMBLER: DIS-ACSEM: ACS DEBUG: PROGSTORE: TOOLKIT:
PROGMERGE (version 2): TAPEKIT
PROGMERGE and TAPEKIT won't make a Spectrum out of your ZX81 but they will give it some interesting new facilities!

Sinclair replies to the critics

IN RESPONSE to many queries which I understand your magazine has received, I would like to explain the delivery situation for our new ZX Spectrum personal computer.

The response of the general public to our new computer has far exceeded our expectations and we have been swamped with orders. This and some small initial production delays have led, in turn, to considerable delays in delivery.

Regrettably, many of our customers may have to wait up to 12 weeks, from our receipt of their order, for delivery of their Spectrum and we are writing to them all to apologise for the inconvenience and to offer them the chance of an immediate refund.

For those customers who continue to wait, we shall be sending with each Spectrum, in compensation for the delay, a £10 voucher, which can be used in part-payment for a ZX printer or to buy a complete pack of five rolls of printer paper. We are also providing customers with a new demonstration tape containing:

A complete keyboard trainer to introduce the Spectrum.

Three major programs — an exciting game, Through the Wall, a drafting program, Draw, and Character Generator, which demonstrates user-defined graphics.

A series of illustrative programs — Bubble Sort, Evolution, Life, Monte Carlo and Waves.

I would like to assure you and all our customers that the initial problems with the Spectrum have now been completely overcome. Production is running smoothly at 5,000 units per week and will rise sharply in the coming months.

We are confident that our present back-log will be cleared by the end of September and hope that you will see current delays in the context of our successful delivery of more than 500,000 computers in the last two years.

Clive Sinclair,
Sinclair Research Ltd.

Growing software

I WAS very interested in your article on the Sinclair ZX Spectrum but I would like to know if programs for the ZX-81 could fit into the ZX Spectrum. If not, why are there no games for the ZX Spectrum of which I have heard?

Andrew McInees,
Ashton-Under-Lyne.

WITH THE information now available for the Spectrum I am thinking of buying one but as yet I have not seen much software for it.

Can the same amount of software be available for the Spectrum as the ZX-81. As there was no competitor for the ZX-81 we saw a flood of software for it.

Can the same be expected for the Spectrum with the news of Vic 10, a new Acorn and even a ZX-83 next year?

S Plumpton (age 15),
Maghull,
Liverpool.

● Sinclair Research says that ZX-81 programes can be converted for the Spectrum with relatively minor changes, as Spectrum Basic is a super set of ZX-81 Basic but, regrettably, ZX-81 cassette programs cannot be used with the Spectrum. There are, however, a growing number of commercial tapes on sale.

Colour printer

CONCERNING YOUR article Sinclairvoyance, in the July issue, the colour printer is already here, at least in prototype form.

Earlier this year Sony announced its Mavika system camera, a video camera producing still pictures on a 50-exposure video disc. The camera will be supported by a television interface for viewing and an "inexpensive" colour printer capable of producing inprint quality non-photographic prints. The system is due to be launched in 1983.

The first ZX hardware company to produce a Mavika-ZX interface should have an eager market.

The Mavika was received by the British Journal of Photography a few months ago. By now it may have more information on the printer.

Tony Bewlay,
Iver, Buckinghamshire.

Readers expect

I WOULD like to take this opportunity to congratulate you on your very good publication. I have found it of great use when using my ZX-81 and especially like the simplicity of the writing style, although this does not stop the articles being really informative.

Now I have purchased a Spectrum and expect your magazine to be of equal merit for this in the future.

S P Bird,
Southall, Middlesex.

Flickering doubt

FIRST I must congratulate you on your review of the Spectrum, which prompted me to order one. Having been a former ZX-81 owner. I am still wondering whether my new Spectrum will have the same flickering screen output when programmed in Basic.

As I want to program in Basic and not Assembler, I do not want a horrible flickering screen. Please could you find out, as no one I know has seen the Spectrum?

C.A. Howes,
Thornbury,
Plymouth.

● According to Sinclair Research there should be no problem with flickering screen output for the ZX Spectrum.

Also stocked at the Buffer Micro Shop, Streatham — Microware Shop, Leicester — ZEDXTRA, Bournemouth — and branches of the Computer Bookshop Group.

Full after sale maintenance available.

ZX81-Spectrum
MANAGEMENT GAMES

AIRLINE
Can you compete with British Airways? You must decide on the number of aircraft to operate, whether to buy or charter, and the levels of staffing and maintenance. Problems encountered are tax demands, strikes, cancelled flights, hijacks and aircraft crashes.

AUTOCHEF
As MD of a Catering Company you must negotiate for leases, decide on menu prices, level of wages, advertising and dividends. Each year you must predict the inflation rate. You will be made to resign if you are not successful. There are 3 levels of difficulty.

PRINT SHOP
You own a small printing company and are required to decide on (a) the number and type of staff you employ and when to increase or reduce staff (b) the amount and type of paper you stock (c) the week in which work is scheduled (d) the quotation for each. There are 3 scales of difficulty.

ALL PROGRAMS INCLUDE DETAILED INSTRUCTIONS AND NEED **16K**.

These simulations are realistic and are not only fun to play but are educational. The user will learn to interpret Trading Profit and Loss Accounts and Balance Sheets. Our programs are very comprehensive and provide a useful introduction to the business world and its terminology.

£5 for one, £8.50 for any two or £12 for three.

PLEASE STATE COMPUTER TYPE AND SEND CHEQUE TO:

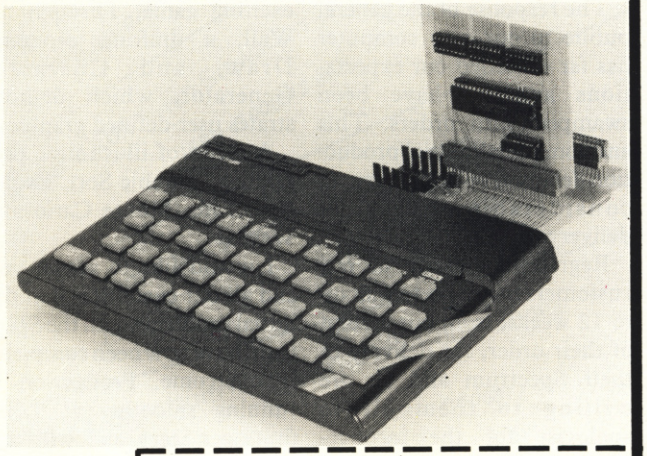
PRESENTING THE NEW. . .

KEMPSTON (Micro) ELECTRONICS
ZX SPECTRUM HARDWARE

See us at the PCW Show (Also at ZX Microfair)



We are proud to announce that we have developed for the ZX SPECTRUM a new 24 line programmable peripheral Interface using MOS technology with the following features:—

- 3 × 8 bit ports
- Port mapped, using IN and OUT commands
- I/O via 16 pin DIL sockets
- I/O also via 28 way edge connector
- Can be used in BASIC or Machine Code

The port is available fully built with a detailed set of instructions and control applications. The port can either be used with out motherboard, thus allowing a further card to be used, or with a stackable connector. Either way, it means that Micro-Drives, Printers, etc., can still be used with the port.

Please note that this is DEFINITELY NOT a ZX81 MODIFICATION but an exclusive design for the new ZX Spectrum.

ZX Spectrum PPI port. £16.50
ZX 2 slot Motherboard. £16.95
ZX Stackable connector. . . . . £ 5.50

All prices inclusive of VAT, but postage must be added at 70 pence for a single item, 100 pence for 2 or more items. Available by mail order only. Cheques, P.O's made payable to:

KEMPSTON (Micro) Electronics
60 Adamson Court, Hillgrounds Road, Kempston, Bedford MK42 8QZ.
Please allow 21 days for delivery. S.A.E. in all correspondence.

New horizons seen by Psion

HORIZONS is the new software cassette from Psion which is to be included in all orders of the Spectrum from now. It consists of a series of programs which will help the beginner master the machine. It is a welcome companion to the manuals.

The programs on side A include a description of the hardware architecture of the Spectrum, a keyboard trainer which explains the various functions and takes the learner around the keyboard, and a dictionary of the keywords on the keyboard. The dictionary is particularly useful to the beginner who is just learning about the version of Basic used on the Spectrum, pressing any key on which brings up the definition of the corresponding keyword on to the screen.

Side B includes several games, a program to design graphics characters and a program which is used to draw high-resolution graphics pictures.

The games on side B are very colourful and use user-definable and high-resolution graphics wherever possible. There is a good version of **Breakout**, which is very addictive.

Also included on side B are a sophisticated version of **Life**, a Bubblesort routine, and **Monte Carlo.**

The presentation cassette is very good. It should keep Spectrum users happy for hours and is well worth waiting for.

Complex patterns

THE GRAPHICS capabilities of the Spectrum take a good deal of exploring and getting used to. With a good knowledge of them you can produce very detailed pictures on the printer or the screen. Until then you could use **Phantasmagraphics.** The program demonstrates just what can be done with the Spectrum graphics. It produces 2D and 3D shapes on the screen according to the dimensions you enter at the start. The program also gives you control over the Ink and Paper and Border colours.

The display build-up of the 3D shapes is slow but that is the fault of the Spectrum graphics system and not of the program. It is interesting to see how the shapes build slowly and how they are formed.

Phantasmagoraphics can be obtained from Saxon Computing, 3 St. Catherine's Drive, Laconfield, Beverley, Humberside, for £6.95.

Golf in hi-res

THE high-resolution graphics of the Spectrum make games like this version of **Golf** possible. The computer displays the layout of each hole, using user-definable graphics for the fairway, rough, bunkers, woods and greens.

The ball is shown as a flashing dot until the player decides to play.

The player must first enter the direction of his shot, a number from one to twelve as on a clock face, and decide how hard the ball is to be hit.

The ball will then move to the new position on the screen. It could finish in the woods or in a bunker.

There are several tips which could be given as to how to get out of the woods and bunkers.

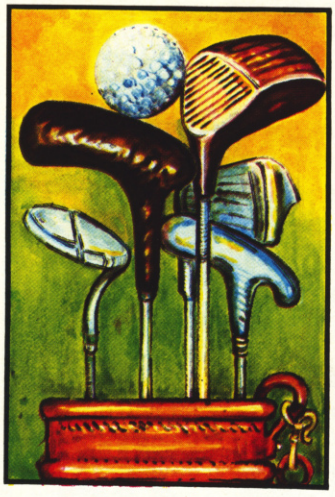
The courses are created randomly but there seems to be some kind of order to the conditions on certain parts of the course.

The game requires a certain amount of skill and patience. For someone who wants a quick arcade-type game it is not ideal. For the person who likes to reason-out moves, who likes quiet games of cunning and skill, this is a good game.

There are two lengths of course included in the game. You can go onto an eight-hole course or on the longer 18-hole course.

Golf is a good competitive game for one or two players, although there is no reason why any number of players should not take part in a tournament. It is pot luck as to whether you will get an easy hole or a difficult hole but that is all part of the game.

The scoring system of the game uses the par of the various holes on the course. After each hole the par for the



hole and the course so far is given. At the end of the course the overall par is given. So far we have managed only 22 over par.

Golf is available from R and R Software, 34 Bourton Rd, Gloucester GL4 0LE, for £3.75.

Storming meteors

THE meteors are rushing thick and fast in the new Quicksilva version of **Meteor Storm** for the Spectrum.

The player has three ships with which to wreak havoc on the screen. There are three types of asteriod to avoid or crash into, depending on how the feeling takes you. Once hit, the asteriods break into smaller versions of themselves and can still be dangerous. Two types of enemy saucer fly across the screen at odd intervals, giving the space pilot even more about which to worry.

The game is similar to the one produced by Quicksilva for the ZX-81 some months ago. The difference is that the screen display is in high-resolution graphics and the player's ship can move around the screen and go into hyperspace if it is in trouble.

As with the other Quicksilva game for the Spectrum, Space Intruders, Meteor Storm has an attract mode which informs the player of the points system and the play keys. It also provides a sample game to get the player used to the display.

Another interesting feature of this game is its capability for speech. This is from the Spectrum speaker during the game. It is not really loud enough to be intelligible.

Meteor Storm is produced by Quicksilva, 92 Northam Road, Southampton, Hampshire SO2 0PB, and costs £5.95.

Avengers take wing

BEING BOMBED by a flock of alien birds from the depths of space can be an experience and it is in a new game for the Spectrum called **Winged Avenger,** which is based on the arcade game **Phoenix.**

Your laser base is at the bottom of the screen and you can switch-on a defence shield to protect if from the evil aliens.

The first three assaults on your base are carried-out by drones in an effort to soften you for the main attack by the big birds. The avengers flap about the screen in formation trying to destroy your base with laser and bomb.

You can return fire but the aliens are really difficult to hit. Winged Avenger is available from Work Force, 140 Wilsden Avenue, Luton, Beds. It costs £6.95.

SPECTRUM'S SOFTWARE SETS YOU A CHALLENGE

Each program is written in Basic for the SINCLAIR SPECTRUM COMPUTER USER. All games incorporate both colour and sound. Flexible parameters intrigue both the beginner and more advanced alike.

SKETCH PAD
Create your own designs, patterns or graphic displays. Includes multi-colours, circle and plot etc.

ANY TWO for £4.95 inclusive

LUNAR LANDER
Command your own module. Monitor progress on the screen. Multiple variables challenge both experts and beginners alike.

MASTERMIND
Pit your wits against the computer. A six character colour code is automatically generated for you to crack.

DISASSEMBLER
Converts machine code into assembler, either from existing memory or machine code entered manually.

CHARACTER GENERATOR
Create pictorial graphics both easily and effectively. Use them in your own programs.

ALL FIVE only £7.95 inclusive

Instructions supplied.
All programs have been written, tested and proved by Spectrum Software's own computer experts. Prices are fully inclusive.

SPECTRUM SOFTWARE,
44-48 Magdalen Street, NORWICH, Norfolk NR3 1JE.

To: SPECTRUM SOFTWARE, 44-48 Magdalen Street, NORWICH, Norfolk NR3 1JE.

ZX81 and SPECTRUM Top Quality Software from

CAMPBELL SYSTEMS

ZX81 16K GULP II "The best computer game I have ever played . . . it beats many actual arcade games! BRILLIANT." says John Fox of Osset, Yorkshire. Endless fun even just in demo mode, and huge numbers of variations. **£4.75**

ZX81 16K-64K THE FAST ONE the best general-purpose business filing system around. Includes sorting, totalling, fully user-definable data and reports. All m/c, comes with 11-page manual. **£15.00**

SPECTRUM SPDE self-relocating machine code Disassembler and Editor, shows all Z80 ops and operands, helps you develop your own m/c — Dr Ian Logan uses it. **£5.95**

SPECTRUM GULPMAN This is GULP II plus colour and sound, and has to be seen and heard to be believed. Totally machine coded, and with scope to POKE your own joystick control. **£5.95**

All programs are supplied double-recorded on cassette, sped 1st class return post. Prices include VAT. Dealer enquiries welcome. Sae for full catalogue.

CAMPBELL SYSTEMS, Dept SU, 15 Rous Rd, Buckhurst Hill, Essex IG9 6BL, England.

ZX Educational Software

Spectrum Junior Education **£5.50**

Use your Spectrum to help your children with their school work. This cassette contains eight attractive, easy-to-use programs for the 7 to 11 age group.

Topics include English comprehension, spellings, homophones, junior science, maths and history.

Entering your own questions and answers allows you to adapt two of these programs for exercises in any subject area.

Moving colour graphics and sound are extensively used to improve motivation.

Suitable for 16K and 48K machines. User documentation supplied with the cassette.

O-Level Chemistry (C1) **£5.50**

This cassette contains four clearly presented revision/tutorial programs. The subject matter has been carefully structured to cover the most important aspects of:

* Elements, compounds and mixtures.
* Structure, bonding and properties.
* Redox, electrolysis and the activity series.
* Acids, bases and salts.

48K Spectrum and 16K ZX81 versions of the cassette are available. Please specify which you require.

Professional Computer Assisted Learning materials from:

CALPAC COMPUTER SOFTWARE
108 Hermitage Woods Crescent, St Johns, Woking, Surrey GU21 1UF.

Overseas orders: £6.50 ($11.60) per cassette; includes AIRMAIL postage.

Andrew Pennell looks at the architecture of Sinclair Research's new machine and finds there is much to interest the Zilog enthusiast as it is the first Z-80-based home computer with high-resolution graphics and colour

Finding ways of making use of machine code on the Spectrum

THE SINCLAIR SPECTRUM is the only Z-80-based home computer with high-resolution graphics and colour and represents a great challenge to Zilog enthusiasts.

The main difference between its predecessor, the ZX-81, and the Spectrum is the fact that the Z-80A is no longer used for the output of the television display, so that any programs run at the speed of the ZX-81 in FAST mode. The Ferranti custom-built ULA handles all the television display, by sharing the screen RAM with the Z-80.

As an assembler is not yet available for the Spectrum, Basic machine code must be entered in hex, and the powerful user-definable functions can be used to good effect converting between decimal and hex. The listing opposite shows several examples of the methods possible:

> 'As an assembler is not yet available, basic machine code must be entered in hex and the user-definable functions can be used to good effect converting between decimal and hex.'

Those functions can then be used for assembly and disassembly.

I have only just begun to disassemble the ROM but already have discovered some very useful features. The RST codes do similar things to those on the ZX-81 but with two important differences.

RST 00 is equivalent to a switch-on and checks the RAM and sets up the system variables. RST 08 is used to terminate a program with an error message. When executed, the byte following the RST 08 instruction is taken as one less than the required report code. Thus, if the byte is 03, error 4 occurs and the message 'Out of memory' is produced. An interesting effect can be achieved if the byte is 28 (1Ch), when an error T occurs with the message '*f* 1982 Sinclair Research Ltd,'. That is an accidental result of the layout of the error message data.

RST 10 is the print-a-character routine and is the only known way to output characters in machine code. On all other systems, the screen is memory-mapped, with each character occupying a byte. The Spectrum screen, however, is only bit-mapped, so it is impossible to POKE characters to the screen — only their colours.

Thus, to print a character at X,Y — taking 0,0 as top left — in machine code, it is necessary to load the accumulator sequentially with four bytes and execute a RST 10 after each. First, 22 (16h), the AT control character, then Y, then X, and finally the code of the character to be printed should each be output. All the values of the registers are preserved, as the alternate set is used.

●RST 18 loads the accumulator with the code of the character to be interpreted.

●RST 20 obtains the next character to be interpreted, ignoring any colour control codes.

●RST 28 is the complex floating-point calculator routine and works in a similar way to that on the ZX-81, by interpreting the data bytes which follow it. Note that the bytes are different and that, in particular, the EXIT byte is 38h and not 34h.

●RST 30 is the making-room routine and increases the workspace by BC bytes, after checking it is possible.

●RST 38 is the maskable interrupt routine and is used to increment FRAMES and to scan the keyboard. Thus, to load the accumulator with the ASCII value of the key being pressed, read the contents of location 23560 (5CO8h).

●RST 66 is the non-maskable interrupt routine and is potentially very powerful. Normally, no INT signals are received by the Z-80, so Sinclair add-ons must generate them. As it stands, the routine, if executed, results in the machine re-setting unless either 23728 or 23729 contain a non-zero number, which is not much use.

It appears that it has been designed for any interrupting hardware to SET bit 4 of location 109 (6Dh), converting a JR NZ to a JR Z. The hardware to do it may even be built into the ULA, just awaiting the appropriate signal. If that is done, then, on receiving an interrupt, the routine pointed-out by the previously-mentioned bytes is executed, if they are non-zero. It is interesting that the Sinclair manual claims those locations are 'not used' and there is no further reference to them in the whole ROM.

The brief machine code section in the manual mentions that the IY and I registers should not be used in any additional routines. In the former case, that is because the IY register contains 23610 (5C3Ah) and is used by the ROM to access the system variables, as it was in the ZX-81.

In the latter case, I have no idea why it cannot be used. Although it is loaded initially with 63 (3Fh), no further use is made of it and it can be changed with no ill-effects.

It may have been used in an earlier version, evidence of which exists on page 202 of the manual, when the command DELETE "filename" is mentioned, despite the fact that DELETE is not in the character set or the ROM — and not on the keyboard as a keyword.

'Evidence of an earlier version is in the manual when the command DELETE "filename" is mentioned, despite the fact that DELETE is not in the character set or the ROM and not on the keyboard as a keyword'.

The alternate set of registers is best avoided, as it is used in the ROM routines, but HL' must never be used, as it is crucial to the floating-point calculations.

I hope that this gives a useful insight into the architecture of the Spectrum and will encourage further investigation. The massive ROM holds many secrets, only a few of which I have managed to discover in the brief time I have had my Spectrum.

USE AND LEARN

16/48K CASSETTE SYSTEM

VOL.1: 25 BASIC PROGRAMS AVAILABLE NOW

£9.95

If you want to get the best from your powerful new Spectrum, you need the powerful **USE AND LEARN** series from **MiCROL**.

Produced by Top British Professionals, volume 1 features 25 practical programs on cassette *plus* a 100 page guide packed with ideas and techniques to improve your own program-writing skills.

The 25 programs give you immediate access to many popular applications:

Games to entertain and challenge you.

General interest programs to demon–strate a wide-ranging potential of your 16K or 48K Spectrum.

And important programing aids to help you write your own programs more effectively. In addition to their practical value, each of these programs illustrates the easy-to-learn techniques featured in the **USE AND LEARN** manual. Time-saving ways to create and control graphics and sound.

Designing reliable command, prompt and help sequences. The meaning (and importance) of terms like trees, tables, sorts and searches. And how the simple but powerful technique of structured programing works in practice — to make program-writing faster and your program more reliable.

Find out for yourself how **USE AND LEARN** makes getting the most from your Spectrum both easy and enjoyable.

Send today for Volume 1 and we will also keep you posted with details of further titles in the **USE AND LEARN** series.

To order simply complete the coupon, and FREEPOST with your cheque, made payable to **MiCROL** (UK Mail Order). Allow 28 days for delivery.

Telephone orders — credit card holders can order by telephoning (0233) 312 866 from 9-5.30 Monday to Saturday, stating name and address, Card No. (Access & Barclaycard) and item(s) required.

ALIEN DEFENCE

ALIEN DEFENCE is a traditional but still enjoyable Defenders game for the 16K Spectrum. You have a Laser Base, movable with keys 5 and 8, and you nail the descending alien hordes with key 7. Allow more than a limited number to pass, depending on the level of difficulty you have selected, and the game is over. Stopping them is made more difficult by their randomised movements and changes of colour. A Hi-Score routine is included to sharpen the competitive element. Submitted by D Frampton of Bridgewater, Somerset.

Graphics Notes:

70 — Graphic n, graphic shifted 8, graphic a, graphic t.
80 — Graphic i.
210 — Graphic b.
220 — Graphic u, two graphic 6s.
300 — Three graphic 6s, graphic 3, graphic 6, graphic 4.
350 — Graphic i.

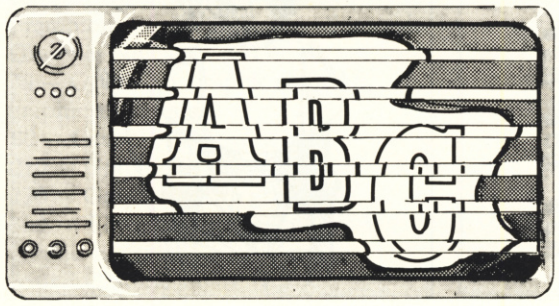
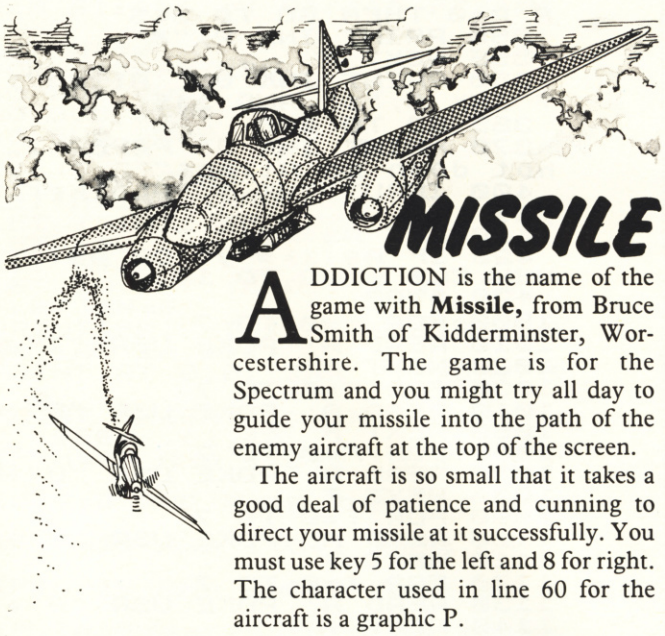
CHARACTER GENERATOR

TYPING-IN long lists of binary numbers to obtain user-definable graphics on the Spectrum can be very interesting. Here is a program to make it easy.

Character generator, by M Thurston of Gorton, Manchester, draws the character on the screen as you define it. The process of defining the 64 pixels is the same but they can be entered into memory without having to worry about all those POKE instructions.

After you have defined the character, you can store it.





MISSILE

ADDICTION is the name of the game with **Missile,** from Bruce Smith of Kidderminster, Worcestershire. The game is for the Spectrum and you might try all day to guide your missile into the path of the enemy aircraft at the top of the screen.

The aircraft is so small that it takes a good deal of patience and cunning to direct your missile at it successfully. You must use key 5 for the left and 8 for right. The character used in line 60 for the aircraft is a graphic P.

Andrew Hewson answers more of your problems

Good reasons for upgrading

JUDGING from my postbag, many ZX-81 owners are trying to decide whether it would be better to purchase add-ons for their computers rather than selling to buy a Spectrum. Katie Quickenden of Faringdon, for example, suggests a number of areas where the ZX-81 might be improved.

Keyboard — The Spectrum keyboard is a great improvement. Its only annoying feature is that the two shift keys perform different functions and it is often necessary to press first one, then the other, and then the first again and so on.

Load, save, verify — I have yet to find anyone who finds LOADing unreliable with the Spectrum, whereas many people find the ZX-81 tiresome. The high speed at which the Spectrum LOADs and SAVEs is also a great advantage.

Number of cables and leads — No difference between the two machines.

Read and data statements — I do not make much use of them but if they are important to you, buy a Spectrum.

Repeat key — Well worth having.

Shift lock — Of small value, to my mind, but it is present on the Spectrum.

File handling — The method of handling cassette files on the Spectrum is rather clumsy but much better than no method at all.

Colour — I enjoy TV more if it is in colour. Similarly I prefer colour computing to black and white computing.

Other potential Spectrum purchasers are wondering whether to buy the 16K or the 48K machines. Richard Carsons of Epsom writes: **"I have read reports that the 16K Spectrum uses 7K to provide colour and graphics, leaving only 9K of usable memory. There are some marvellous 16K ZX-81 adventure games. Am I correct in thinking that they will not fit into what is left of the standard 16K?**

Broadly speaking, Richard is correct. A program which just fits into the 16K ZX-81 is unlikely to fit into the Spectrum without a major modification. Many so-called 16K programs, however, do not use all the available RAM. There is also a number of ways in which Spectrum Basic is superior to ZX-81 Basic, so it may be possible to reduce the space required without discarding any of the functions of a program.

> 'A program which just fits into the 16K ZX-81 is unlikely to fit into the Spectrum without a major modification.'

For example, the Spectrum allows multiple program lines with each program line, separated by a colon. A colon occupies only one byte in the program area whereas a program line has an 'overhead' of five bytes — one byte for the Newline character, two bytes to hold the line number and two to hold the length of the program line. There is no limit to the number of program lines which may be concatenated in this way and so a good deal of space can be saved. The only thing to stop you putting all your program on one line is that GOTOs and GOSUBs must be made to lines starting with a line number and that IFs skip to the next line number if the appropriate condition is not true.

Peter Feast is also considering whether to buy a Spectrum. He asks: **"I require the machine to store about 50 names and addresses, together with five further pieces of information in the form of variables and strings. Can the Spectrum cope?"**

I can provide only half an answer to the question because much depends on the space occupied by the software to manipulate his records, which in turn depends on the sophistication he requires.

As a general principle, storage of data requires much more memory than calculations or games. I would be inclined to buy the 48K machine. Supposing we allow 15 characters per name, 15 characters for each of three address lines and eight characters for a post code, then the names and addresses alone will occupy (4*15+8)*50, or 34,000 bytes. Each numeric variable occupies five bytes and strings can be any length, but allowing another 30 bytes for the variables and strings the data would probably occupy at least 6K in total.

That leaves just 3K for a program to enter, review, edit, save and print the data. That is sufficient for a machine code program but certainly not enough for one written in Basic.

HILDERBAY LTD
Professional Software

SPECTRUM SOFTWARE now available!

Details from us.
48K Payroll £25 until 21 September

Tape recorder suitable for microcomputer use, aligned and tested on computer signals **£22 + £2 p&p.**

Hiderbay Loading Aid. Load your microcomputer from tape first time every time! **£5.95.**

ZX-81 16K RAM packs, comprehensively tested (for bad bits, addressing faults, printer, saving) £30.

HILDERBAY SUMMER ZX-81 SALE

Beamscan (beam analysis) **Payroll** **Stock Control**	**£13 each**
Optimax	**£20** until 21 September
Budget I & II	**£9** (2 programs)
Time Ledger **Critical Path**	**£8 each**
Financial Pack I **Gold**	**£5 each**

These programs have been described and reviewed previously (or we can prove details).

All prices include VAT, and are post free. Sale prices are valid until 21 September 1982. Free updates, comprehensive telephone and personal support, and competition prizes are not available for summer sale purchases.

ZX81 Workstation...

. . . is a stylish and ergonomic plinth for the ZX81. It raises and tilts the TV to avoid eyestrain, holds the 16KRAM in place and hides the wiring and power supply. This very professional unit costs £15, a built-in power switch is £3, plus postage at £1.50, inc. VAT.

Peter Furlong Products, Unit 5, South Coast Road, Industrial Estate, Peacehaven, Sussex BN9 8NA.
Telephone 07914 81637 for C.O.D. and Credit Card sales.

ZX SPECTRUM
INTEGRATED ACCOUNTS

A fully interactive massive 41K program providing Sales and Purchase ledgers, Petty Cash account, Trading and Profit & Loss accounts, Nominal ledger Balance Sheet, and a complete VAT return from simple data entry routines. 16 menu options including a Training routine for practice and accounting education.

Colour of screen output continually indicates profit state of business and Bank Balance.

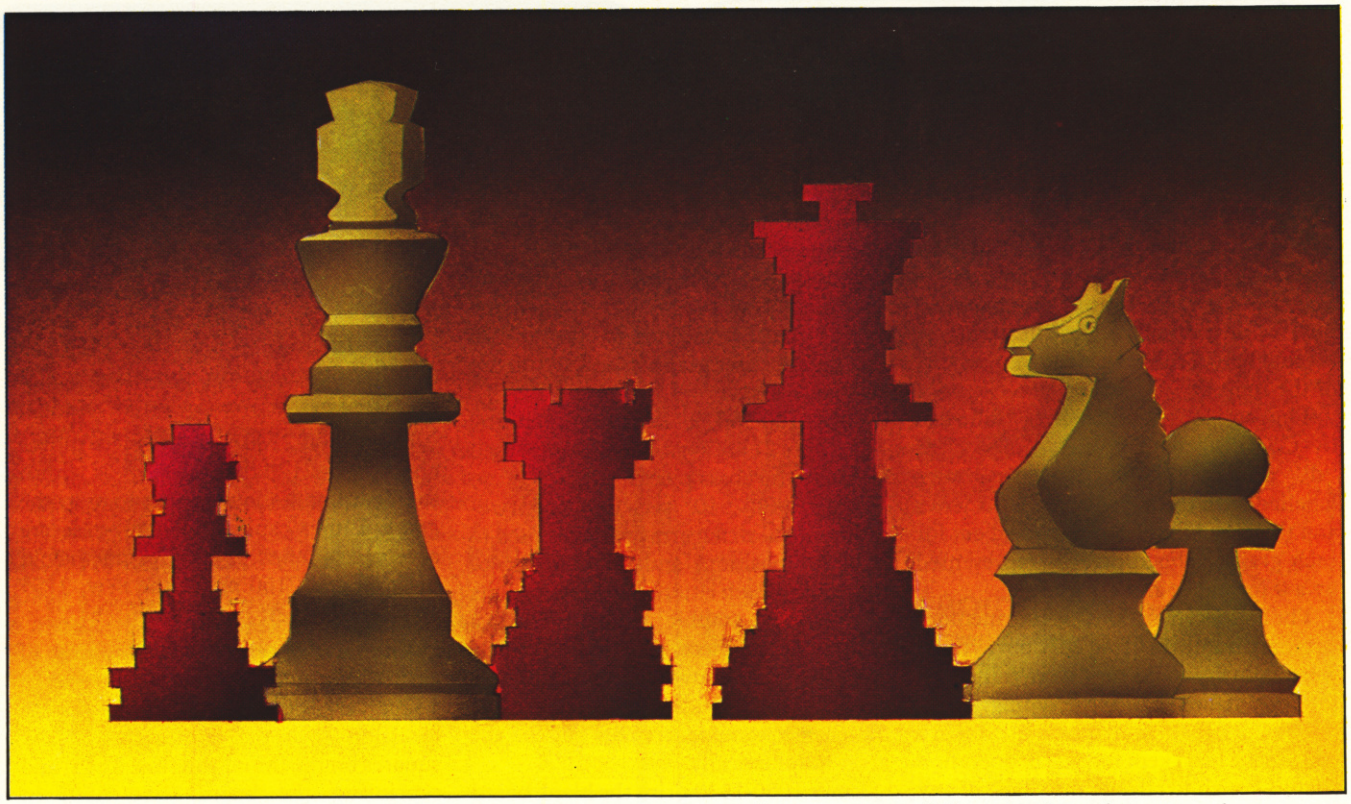
Verified program cassette complete with 30 page instruction manual inclusive post free at **£39.50.**
Program manual supplied separately at **£2.00.**
(refunded on program purchase).

POOLS PREDICTION — ZX81 or SPECTRUM

A 10K goal-average-based score prediction system with draw probability factor.
Program includes Random Selector, Full-perm calculator and sequence listing of best home, draw and away matches.

Supplied complete with instruction book and season data entry sheets. Inclusive price at **£6.50.**
(please specify ZX81 or SPECTRUM).

Cash with order to:
WILLDEN SERVICES LIMITED, Maybank, Yew Tree Lane, Rotherfield, E. Sussex.



Christopher Leigh details attempts to improve Sinclair chess pieces

Upgrading the manual

WHEN I received my Spectrum, just six weeks after it was arrived I working quickly through the instruction manual provided. I found very few mistakes and some stimulating ideas but the chess routine which was provided gave such a tiny display a magnifying glass was needed to distinguish the pieces. I set to work to write a bigger version.

I started with a piece of graph paper, thinking about the chess pieces and how they could be improved. The obvious aim was to make them bigger but that meant using more than one character space for each chess piece.

it would have been good to fill the screen with a 24*24 display but I settled for a 16*16 one. That meant that each chess-board square consisted of four printing spaces arranged 2*2.

Printing the board was fairly easy; the labelling was added later. A white screen was kept for ease of reading, though a black screen would probably look more impressive.

The board was printed using paper colour controls so that ink could be reserved for the pieces. It seemed more sensible than, for example, to print one large magenta and then to put green ink squares over it, which would have involved using "Inverse"; Inverse can be confusing.

Using the graph paper I drew the pieces, shading-in with a pencil each little square — representing a pixel — which needed inking-in. That was translated into a binary code which could be POKEd. The user graphics are of memory.

Three considerations affected the shape of the pieces. They had to leave enough margin to show clearly the colour of the square on which they were printed.

They had to be very clearly distinguishable. For that reason pawns were

continued from page xix

made smaller than other pieces. The third consideration was more awkward. Each piece occupies a 2*2 square, requiring four user graphics to define it. There are six different pieces in chess so that 24 graphic characters would seem necessary but only 21 are available.

The answer was to share some of them between pieces; the fourth quarter of the queen is the same as the corresponding quarter of the knight and the complete bottom half of the king is the same as that of the rook.

The rook consists of USR "a" followed by USR "b" with USR "e" and USR "d" underneath. Each drawing was labelled with the appropriate USR letter and then the binary codes worked out for each graphic. Each pixel is represented by a 0 for paper and a 1 for ink.

The codes can be POKEd into memory as binary numbers using BIN but as there were so many to do they were translated into decimal to reduce the typing.

The original drawings and binary codes have been kept for ease of operation should I wish to change the shape of any piece, figure one shows how this all works out for the rook.

With the pieces complete the most laborious part of the job was over. The next task was to put the pieces on the blank board. The user graphics could be typed-in but that would make any kind of game impossible.

The pieces must be held in a string or array. I settled for an 8*8*4 string array so that each board position was fully-defined and all four labels for the user graphics could be put into the array for each piece, which proved to be fairly simple. The use of upper- and lower-case letters gives the array an extra dimension so the computer always knows the colour of any pieces referred to.

Once the board array was set up, printing it was merely a question of getting the numbers correct so that the proper graphic was printed at the correct position. Number juggling was also needed when entering moves.

At that stage I was able to run the program and see if it worked. It did; I was bothered by the blank screen at the start of the program, which occurs while the machine processes lines 1-1000. To provent the player thinking something was wrong lines 70-90 were added.

Other improvements were made.

There was a long wait between printing white and black pieces. The Spectrum was printing blanks all over the centre of the board. Variable "w" was used to suppress such stupidity on the first run. On subsequent runs the player has to suffer space printing, as it is used to erase pieces which are out of place.

The complete listing is shown in figure two. The program puts board and pieces on the screen and then allows you to move them at will. Pawns automatically become queens on last rank, castling has to be done in two moves. Games can start with the pieces put in any position.

Lines 70-90 print a title and flashing "thinking!" so the screen is not blank during the few seconds it takes to run through the user graphics and setting-up the board array.

Lines 100-350 poke the user graphics. Since only 21 are available, three are used twice by the chess pieces.

Lines 500-640 set up the two-dimensional string array which is used to hold the positions and the make-up of each piece. Each letter of the string points to the user graphic which defines a quarter of the piece. The use of upper- and lower-case allows you to distinguish between black and white pieces. The dimension statement (520) re-sets the array automatically.

Lines 1000-1130 print the blank board using magenta and green. They were chosen to give maximum contrast and therefore clarity for the pieces which were black and white for simplicity. It is spaces that are printed using colour control characters (see page 115 of the manual) to define their paper colour. Remember to switch back to white paper after the fourth space.

Lines 1500-1620 print the pieces on the board using black or white ink. Paper 8 keeps the board squares their original colour. Lines 1580 and 1590 keep the print position within the correct 2*2 square.

Lines 2000-2200 enter the piece moves checking at 2120 that the move is within the board and allowing you to stop the game. Either capitals or lower-case are accepted in input, 2140 unprints the old position and 2160 prints the new, 2155 and 2156 convert pawns to queens.

The variable set in 2150 allows use of earlier lines as a subroutine. It is re-set in 1520. Variable w (set in 260) allows the omission of some printing — blank squares on the initial run (line 1615) and reprinting the board (line 650) in subsequent games. w is resent at 2190.

ZX81 EDITOR

FOR ALL ZX81 PROGRAMMERS

Based on the editing facility available on a DEC system 10 mainframe computer the ZX81 EDITOR provides 7 powerful editing functions for the 16K ZX81.

Demonstration program:

```
 5 LET A$="VT4;ZA9EPKN>7QUZJKS"
10 LET B$=" "
15 FOR N=1 TO 19
20 LET B$=B$+CHR$(CODE A$(N)+PEEK 256)
25 IF N=5 OR N=16 THEN LET B$(N)=" "
30 PRINT B$
35 NEXT N
```

■MERGE
Combine editor with any other program. Option to continue combining indefinitely; available RAM only limitation.

■RENUMBER
"R increment"
eg) "R 10"

```
10 LET A$="VT4;ZA9EPKN>7QUZJKS"
20 LET B$=" "
   etc.
```

■SUBSTITUTE
"S old text$new text$line no"
eg) "SNX15:35"

```
15 FOR X=1 TO 19
20 LET B$=B$+CHR$(CODE A$(X)+PEEK 256)
25 IF X=5 OR X=16 THEN LET B$(X)=" "
35 NEXT X
```

■EXTEND
"E line no"
eg) "E 5"

```
5 LET A$="VT4;ZA9EPKN>7QUZJKS"L
```

Prints out the line so far with cursor at the end ready for you to extend or edit.

■TRANSFER
"T first line no, last line no:new first line no, increment"
eg) "T15,35:100,1"

```
  5 LET A$="VT4;ZA9EPKN>7QUZJKS"
 10 LET B$=" "
100 FOR N=1 TO 19
101 LET B$=B$+CHR$(CODE A$(N)+PEEK 256)
    etc.
```

■DELETE
"D line no:line no" Delete any block of program.

■SCROLLED LISTING
"S line no" Continuous scrolling list starting at beginning of program unless otherwise specified. Listing can be stopped at any time for editing.

■All standard editing functions provided by Sinclair can be used as normal.

MELBOURNE HOUSE • ZX81 • SPECTRUM

Why is this man smiling?

You'd be smiling too if you were Dr. Ian Logan.

Dr. Logan is shown receiving the Rosetta Stone Award for his perceptive insights into the way the ZX81 ROM operates. Melbourne House are proud to be the publishers of Dr. Logan's books.

Melbourne House are Sinclair specialists, publishing books that are winners in every category. Whether you are a beginner or an experienced programmer, you'll need Melbourne House books.

If you've got a Spectrum on order (or better yet, if you've already got your Spectrum), then you'll be glad to know that Dr. Logan is working on **Understanding Your Spectrum**, sure to become the definitive book on the Spectrum.

So if you want to smile like Dr. Logan, you can do one of two things: Order one of our books from your bookseller or fill in the coupon and really understand your Sinclair, or you can write a great book or program and send it to us. Who knows? Your smile may be in this ad. next year!

- O **Machine Language Made Simple For Your Sinclair**, £8.95
- O **Understanding Your ZX81 ROM**, by Dr. Ian Logan, £8.95
- O **ZX81 ROM Disassembly Part A**, by Dr. Ian Logan, £7.00
- O **ZX81 ROM Disassembly Part B**, by Dr. Ian Logan and Dr. Frank O'Hara, £8.00
- O **Not only 30 Programs for the ZX81: 1K,** £6.95
- O **The Complete Sinclair ZX81 Basic Course,** £17.50
